Note

This and other government publications may be purchased from local authorized agents and other community bookstores or by mail order.

Mail orders should be sent to Publications Distribution, Statistics Canada, Ottawa, K1A 0T6, or to Publishing Centre, Supply and Services Canada, Ottawa, K1A 0S9.

Inquiries about this publication should be addressed to:

CANSIM Division

Statistics Canada, Ottawa, K1A 0Z8 (telephone: 995-7406) or to a local Advisory Services office:

St. John's (Nfld.)	(726-0713)
Halifax	(426-5331)
Montréal	(283-5725)
Ottawa	(992-4734)
Toronto	(966-6586)
Winnipeg	(949-4020)
Regina	(359-5405)
Edmonton	(420-3027)
Vancouver	(666-3695)

Toll-free access to the regional statistical information service is provided in Nova Scotia, New Brunswick, and Prince Edward Island by telephoning 1-800-565-7192. Throughout Saskatchewan, the Regina office can be reached by dialing 1-800-667-3524, and throughout Alberta, the Edmonton office can be reached by dialing 1-800-222-6400.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index— $7.

This Index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory— $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
— Director General, Content and Analysis Branch
— Director, Financial Flows and Multinational Enterprises Division
L.O Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
Editor-Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

[1]The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2]Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3]Includes logging, fishing, trapping and hunting. [4]Includes mechanical and construction. [5]Includes a small number in non-specified occupations. [6]Beginning with 1978 includes fiancés and fiancées. [7]Does not include students entering Canada on students' visas. [8]Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are included with spouses.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Real Domestic Product by Industry of Origin, Quarterly
27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

Year and quarter	Wages, salaries, and supplementary labour income	Military pay and allowances	Corporation profits before taxes[1]	Deduct dividends paid to non-residents[2]	Interest & misc. investment income[3]	Accr'd net income of farm operators from farm prod.[4]	Net income of non-farm un-incorp. business incl. rent[5]	inventory valuation adjust.[6]	Net national income at factor cost	indirect taxes less subsidies	Capital consump. allowances & misc. val. adj.	Residual error of estimate	GNP at market prices	GNP at market prices excl. accrued net income of farm operators

[1]Excludes profits (net of losses) of government business enterprises. [2]Includes the withholding tax applicable to this item. [3]Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4]Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5]Includes net income of independent professional practitioners. [6]See footnote 4, Table 1.2.

[1]Includes defence expenditures. [2]Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3]Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4]The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5]See footnote 4, Table 1.1.

[1]The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1]Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2]Tax liabilities. [3]Withholding taxes. [4]The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

[1]These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

[1]The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group [2]The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

[1]"Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2]Annual figures are averages of 12 months. [3]Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments.[4]Trainees on courses approved by Canada Employment and Immigration Commission.

[1]Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2]The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3]The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4]The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5]Includes publishing and allied industries. [6]Includes storage and communication industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3]Includes storage, electric power, gas and water utilities. [4]Excludes domestic service.

[1]See footnote 1 and source in Table 10. [2]Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4]Except machinery and transportation equipment industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

[1]These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1974. [2]With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures used in the compilation of city indexes conform to those of the Canada indexes.

[1]Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2]Shipments of goods manufactured within the establishments. [3]Total new orders received during the period at estimated selling value, net of cancellations. [4]Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

[1]Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers.
Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)/concluded

Annual average and month	Furniture and fixtures	Paper & allied industries	Printing publishing & allied industries	Primary metal	Metal fabricating (ex. machy. & transp. equip.)	Machinery	Trans-portation equipment	Electrical products	Non-metallic mineral products	Petroleum and coal products	Chemical & chemical products	Misc. mfgrg.

[1]Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2]Intended for cigarettes. [3]Includes pipe, plug, chewing, twist, snuff etc. [4]Sales to wholesalers, retailers and institutions which are subject to excise duty. [5]Includes sales for ships' air stores, embassies of Canada and for export. [6]End of period.

[1]Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2]Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3]Customs exports. [4]Mill shipments destined for export.

[1]Data compiled according to the Steel Distribution Index revised January, 1964. [2]Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3]Excluding shipments for re-processing at maker's own plant. [4]Data compiled as submitted by the steel producers according to the steel industry distribution code.

[1]Gas types are included. [2]Includes producers' shipments for export. [3]In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4]End of period. [5]Electric and other. [6]Excludes apartment type machines. [7]Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
[1]Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2]Includes crude oil, condensate and pentanes plus. [3]Gross new production by field less field flared and waste.

[1]Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2]Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3]Includes stove oil, kerosene. [4]Includes aviation gasoline and aviation turbo fuel. [5]Includes propane and propane mixes and butane and butane mixes. [6]Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products.

[1]A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences.
[1]Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2]Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3]Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4]Includes new and existing commercial structures and farm property.

[1]Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2]1977 and 1978 price indexes are subject to revision. [3]1978 price indexes are subject to revision. [4]Farm share only of motor vehicles. [5]The major groups include additional components than the selected ones shown.

[1]Column numbers refer to Tables 3 and 4, Section 11. [2]Includes special transaction-trade, not shown separately. [3]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4]Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

[1]Column numbers refer to Tables 3 and 4, Section 11. [2]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3]Includes special transaction-trade, not shown separately. [4]Includes scrap. [5]Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

[1]Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2]Cargo includes air freight and express but excludes mail and excess baggage.

[1]Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2]Daily averages for period. [3]Mainly deposits of foreign banks. [4]Capital, rest fund and undivided profits as at the latest fiscal year-end. [5]Including issues payable in foreign currency. [6]Excluding Canadian day-to-day loans. [7]Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8]Loans to grain dealers and exporters. [9]Loans to finance purchase of Canada Savings Bonds at time of issue. [10]Including loans to instalment finance companies. [11]These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1]This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2]Seasonally adjusted data for Saskatchewan is not available.

[2]This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [3]Beginning in December 1973, this category includes oil export tax. [1]March includes supplementary payments arising from the closing of the accounts.

1 Number of children: Each individual who appears in juvenile court is counted only once. In order to arrive at this count, it is necessary to link all those delinquencies committed by the same individual and to select for inclusion in the table only one delinquency. The delinquency selected is the one for which the most serious court action was taken.

2 Found delinquent: Judgement of the court that the accused had, contrary to the juvenile delinquents act, violated a provision of the criminal code or of any federal or provincial statute or municipal by-law or been guilty of sexual immorality or a similar form of vice. This count includes those adults convicted of contributing to a child becoming a delinquent.

3 Not found delinquent: Indicates that court action was terminated without a finding of delinquency (i.e. the case was dismissed, withdrawn, adjourned sine die, etc.) or that the juvenile was referred to adult court.

4 Adult: A person who exceeds the age defined by the province as being the legal maximum for the purposes of the juvenile delinquents act. Adults may be charged with offences related to juveniles (e.g., contributing to a juvenile becoming a delinquent). Also counted as adults — if over the age limit — are persons found delinquent and returned to court to have their disposition reviewed.

5 Age is the age of the accused at the time the offence was committed. If a juvenile who is found delinquent is returned to court to have the original disposition reviewed — under section 20(3) of the Juvenile Delinquents Act or, in NFLD., under section 20(4) of the Welfare of Children Act — age is the age at the time of court appearance.

6 P.E.I. data not available for 1974 to 1978.

7 MAN. offences under the Highway Traffic Act and Liquor Control Act are excluded for 1974 to 1979.

8 SASK. reporting is incomplete for the years 1974 to 1979.

9 B.C. data not available for 1974 to 1979.

10 N.W.T. data not available for 1974 to 1979.

11 The decline in the number of delinquencies in 1979 & 1980 is attributed to Quebec's proclamation of the Youth Protection Act.

Sources: CANSIM Cross Classified Table — 00170207 Court Decisions — Publication — Juvenile Delinquents — uncataloged.

[1] Number of Delinquencies: Every delinquency for which court action was terminated in the year specified is counted. Therefore, a juvenile may be reflected more than once in tables having this basic unit of count if he/she was charged with committing more than one delinquency.

[2] Return to Court: A juvenile who is adjudged delinquent may be returned to court at any time before reaching the age of 21 years (17 years in NFLD.). This most often happens because the juvenile breaches the conditions of probation. Although in the tables it is associated with a judicial decision of guilt or innocence, this is not strictly correct. The judicial decision was made when the original offence was committed; the action taken when the juvenile returns to court is a supplementary measure.

[3] Age is the age of the accused at the time the offence was committed. If a juvenile who is found delinquent is returned to court to have the original disposition reviewed — under section 20(3) of the Juvenile Delinquents Act or, in NFLD., under section 20(4) of the Welfare of Children Act — age is the age at the time of court appearance.

[4] Adult: A person who exceeds the age defined by the province as being the legal maximum for the purposes of the Juvenile Delinquent Act. Adults may be charged with offences related to juveniles (i.e., contributing to a juvenile becoming a delinquent). Also counted as adults — if over the age limit — are persons found delinquent and returned to court to have their disposition reviewed.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index— $7.

This Index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory— $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:

G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
— Director General, Content and Analysis Branch
— Director, Financial Flows and Multinational Enterprises Division
L.O Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
Editor-Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Financial Activity in Canada in the Third Quarter 1981

An Overview

The sharp downturn in economic activity in the third quarter was reflected in the reduced amount of financing activity in Canada. Non-financial domestic sectors of the economy (i.e., households, unincorporated business, non-financial corporations, both public and private and general government) raised $16686 million via conventional credit market instruments. This compared with $22964 million in the previous quarter (when a number of very large takeovers boosted financing activity considerably), and an unusually low $8802 million in the third quarter of 1980. The funds so raised represented 18.6% of the value of final goods and services produced in the third quarter of 1981, extending a trend of reduced demand for funds during the third quarter of the year. The drop was accentuated by the decline in economic activity in the period under review, and would have been substantially lower had there not been a large overhang of takeover financing from the second quarter. Moreover, borrowing appeared to be necessary to finance inventories that would normally have been expected to fall substantially during the period.

Non-financial private corporations accounted for about 45% of the funds raised on conventional credit markets by non-financial domestic sectors, compared with only about 22% in the same period in 1980. The relative shares of the household and government sectors fell to about one quarter and one fifth, respectively, down from almost 39% and 34%, respectively, in the same period the year earlier. The main vehicles of financing by non-financial domestic sectors were bonds (28%) and bank loans (32%). High rates of interest appeared to influence the term of financing. Short term financing amounted to slightly more than half total financing, compared with a mere 14.2% during the third quarter of 1980, when interest rates were generally falling.

Other factors affecting financial market activity in the third quarter included: continuing high rates of inflation; a severe deterioration in the earlier part of the quarter in the external value of the Canadian dollar vis-à-vis its United States counterpart; a further drop in M1; virtually no growth in gross fixed capital formation; an acute drop in corporate profits; a reversal in the seasonally adjusted annual rate of housing starts; a further reduction in the Government of Canada's net borrowing requirement which was partially offset by an increase in the provincial governments'; and the mail strike which ran from late June to early August.

Economic Activity

The Canadian economy underwent a sharp drop in the third quarter, as the exceptionally high rates of interest began to slow economic activity. Compared with the previous quarter, Gross National Product fell 1% in real terms while rising 1.6% in nominal terms (on a seasonally adjusted basis). There was a slight rise in inventories by non-farm corporate sectors, while on a seasonally adjusted annual basis, they rose some $2740 million. If the largely involuntary build-up in inventories had been excluded, the drop in real output would have amounted to 1.9% on a seasonally adjusted basis.

Much of the growth in the Canadian economy in the previous three quarters had been fuelled by gross fixed capital formation. However, in the third quarter of 1981, growth in this component of Gross National Expenditure virtually ceased in nominal terms, while declining from the previous quarter by 7.9% in volume (at a seasonally adjusted annual rate). A record drop in net savings by non-financial private corporations, however, meant that only 58% of their non-financial capital accumulation was financed by internally generated funds. This was on the same order as the previous quarter (when these

---

[1] The determination of the Federal Reserve Board to continue its restrictive monetary policy was indicated by Chairman, Paul Volcker, in hearings before a congressional committee in July. At that time, he announced that the new target range for fiscal year 1982 for the growth of M1B (which will become M1) would be lowered to 2.5% to 5% above the average level in the fourth quarter of 1981, down from the range of 3.5% to 6% in 1981.

[2] The rate of growth is calculated as follows: the average seasonally adjusted level of the quarter is divided by the average seasonally adjusted level of the previous quarter and then compounded to an annual rate.

[3] The large increase in holdings of Treasury bills by the household and unincorporated business sector ($495 million) appeared to the result of errors and omissions in the survey system, as this sector is residually derived. Timing problems may also have been a factor. However, because there was no indication which sector(s) were under-reporting, no attempt was made to adjust the data arbitrarily.

companies made substantial acquisitions of land and existing assets) but was down sharply from 94% in the third quarter of 1980. The industries showing continuing growth in gross fixed capital formation were largely resource based: petroleum and coal, metal mines, primary metals, communications, pipelines, transport and transportation equipment. Most of these industries showed relatively strong profit performances.

Personal expenditure on goods and services was up 12.5% in nominal terms and 1.2% in real terms from the same period in 1980 but down 0.9% in real terms from the previous quarter (seasonally adjusted). Expenditures on consumer durables were hardest hit, falling 5.7% in volume from the second quarter, with interest sensitive purchases, such as automobiles, furniture and household appliances, suffering the most significant decline. The temporary suspension of Ontario sales tax on these latter two items in the second quarter may have advanced sales, contributing to the drop in the third quarter, when the tax was reinstated.

Housing starts during the third quarter, averaged 178,300, compared with 223,800 in the second quarter, and 158,500 in the third quarter of 1980 (seasonally adjusted annual rates). The actual number of starts in the third quarter was 50,800, compared with 60,300 in the second quarter and 45,800 in the same period of 1980. The low level of housing activity in the quarter appeared to be related to the exceptionally high rates of interest that characterised the quarter.

The deficit on Canada's current account on transactions with residents of the rest of the world was $1285 million, a swing of over $2 billion from the third quarter of 1980.

Interest Rates, Capital Markets and Monetary Aggregates

The principal feature of capital markets in the third quarter was the unparalleled heights reached by interest rates. As the Bank Rate reached 21.24% in early August, the chartered banks raised their prime rate to 22.75% at which level it remained for a month before declining 150 basis points by the end of the quarter.

The record levels in interest rates were prompted, in large part, by the need to defend the external value of the Canadian dollar. Downward pressure on the Canadian dollar began to build earlier in the year as the Federal Reserve Board in the United States adopted a very restrictive monetary policy in its fight against inflation[1], producing unprecedentedly high rates of interest in that country. In view of the inflationary impact of any depreciation of the Canadian dollar against its United States counterpart, the Bank of Canada responded by forcing up interest rates in Canada in order to maintain a yield differential in favor of investing in this country.

During July, the uncovered yield differential on short-term instruments began to narrow. This factor, taken in conjunction with the perception that the failure to secure an oil pricing agreement between the federal and Alberta governments was damaging to the Canadian economy and international position placed such downward pressure on the Canadian dollar that it was pushed to a near record low of 80.3 cents U.S. in early August. Thereafter, with the uncovered yield differential on short-term instruments reaching about four percentage points for the balance of the quarter, the Canadian dollar recovered somewhat, and closed the quarter at 82.9 cents U.S.

The defence of the Canadian dollar placed a burden on the country's international reserves, which fell to U.S. $2.3 billion at the end of July, a nineteen year low. They would have fallen further had not the Government of Canada borrowed U.S. $500 million on its line of credit with Canadian chartered banks. The downward pressure on the dollar continued into early August prompting the federal government to draw down an additional U.S. $700 million in that month. The improvement in the latter part of the quarter permitted the federal government to repay U.S. $700 million in September so that Canada's international reserves fell U.S. $100 million.

The run up in interest rates at the short end of the market meant the persistence of the inverse yield curve that had characterised capital markets in Canada for much of the past three years. Even so, yields on longer dated instruments also rose sharply over the quarter, lagging the peaks on short-term paper by six to eight weeks. As a result, yields on bonds were at their highest at the end of September. Yields on long Canadas reached almost 18%, while those on provincial government long term bonds rose to 18.7%. The wide yield differential over United States dollar issues appeared to be a factor in encouraging substantial sales abroad of debt issues by provincial government enterprises.

The high interest rates, and the associated drop in economic activity, resulted in a steep decline in M1 in August and September (the mail strike from late June to early August masked a continuing decline that had begun in May), so much so that M1 at the end of the quarter under review was lower than it had been twelve months earlier. On the other hand, the larger monetary aggregates experienced strong growth as depositors were attracted to the high real and nominal returns on the interest bearing accounts which are excluded from the narrower aggregate. M2 grew 16.4% and M3 25.5% over the quarter, seasonally adjusted at annual rates[2].

The drop in M1, coupled with an increase in Gross National Product in nominal terms, meant that the velocity of circulation of money accelerated during the quarter, as measured by GNP at seasonally adjusted annual rates divided by average stock of M1 in the quarter. However, if the velocity of money is taken to mean Gross National Product divided by M2, a gradually slowing trend becomes apparent.

The decline in M1 was compounded by the mechanisms through which the external value of the Canadian dollar was defended. The Monetary Authorities bought Canadian dollars on foreign exchange markets with, principally, United States dollars. These Canadian dollar balances were then transferred to the Government of

Canada. This process reduces M1 as the federal government's balances are not included.

Despite the high level of interest rates and the lower level of economic activity in the quarter, bank lending remained relatively strong when compared with the third quarter of 1980 (when bank borrowing declined $1517 million). The relatively high amount of bank borrowing was, in part, attributable to several takeovers. The financing of takeovers had played a large part in the huge amount of bank borrowing in the second quarter, when $11584 million had been borrowed. However, following a request by the Minister of Finance that banks restrain this type of financing, inasfar as it affected foreign exchange markets, excepting those related to the National Energy Program, the amount of takeover financing fell sharply.

During the third quarter, several subsidiaries of foreign banks obtained their charters to operate as banks in Canada, as provided for under the 1980 revisions to the Bank Act. As a result, the change in the balance sheet levels of bank borrowing between the end of second and third quarters was substantially larger than the flow of funds. The reason for this is that many of these companies had been operational as financial institutions prior to obtaining their charters, and a mere change of sectors does not create a financial flow.

Credit Market Developments

Short-term Paper and Treasury bills

Net sales of short-term paper (including bankers' acceptances) amounted to $2050 million during the reference period, almost double the increase in the same period of 1980. "Other Financial Institutions" were the major issuers ($975 million) with most of the sales being offered by holding companies. Non-financial private corporations sold $649 million. The major purchasers were chartered banks ($549 million), trust companies ($569 million) trusteed pension funds ($475 million) and non-residents ($637 million).

The substantial increase in the issuance of short-term paper would appear to be largely at the expense of short-term bank loans. The yield differential between the prime rate and 30-day bankers' acceptances, for example, widened over the quarter from 55 to 175 basis points in favour of the latter instrument. Given the close substitutability of the two instruments, a change of that magnitude would be expected to produce a significant change in borrowing behaviour.

The Government of Canada made $500 million net sales of Treasury bills, compared with $1160 million in the equivalent period of 1980. The reduced amount of sales reflected the lower net financing requirement of the federal government, coupled with the increased cash deposits produced by purchases of Canadian dollars on foreign exchange markets.

The major purchasers were the chartered banks ($893 million) and non-resident ($203 million) while the Bank of Canada ($923 million) and investment dealers ($195 million) reduced their holdings of this instrument[3]. The substantial sale of Treasury bills by the Bank of Canada helped maintain a very high yield on these investments throughout the latter part of the quarter, when interest rates were falling in the United States and economic activity was declining in Canada. These factors would normally have been expected to produce a much sharper drop in interest rates than the drop of about 165 basis points that occurred between early August and the end of September.

Loans

Bank loans outstanding rose some $5668 million in the third quarter of 1981, compared with a drop of $1517 million in the same quarter of 1980. Relatively strong demand by non-financial private corporations which borrowed $4128 million was the only major strength, notably by the petroleum and coal and mineral fuels industries.

The federal government made net borrowings of U.S. $500 million ($619 million Canadian) on its line of credit with Canadian chartered banks to augment Canada's international reserves.

The relative strength of bank borrowing at a time of record high interest rates and falling economic activity may be explained in part by some takeover financing, a need to finance inventories when they would usually be falling much more rapidly, and a more pervasive reluctance to incur a long term liability when a drop in the yield of longer term instruments may have been anticipated by some borrowers.

Net new "other loans" grew very strongly, rising $2587 million, with most of the demand for these funds coming from non-financial private corporations ($535 million) and "other financial institutions" ($1120 million). The borrowing by the latter was swollen by a holding company which was completing a takeover that had started in the second quarter. Much of the funding was provided by non-residents ($1769 million).

Bonds

The bond market recovered somewhat in the third quarter, with placements of net new marketable bonds amounting to $5868 million, compared with $4329 million in the second quarter and $4729 million in the third quarter of 1980. The improvement was largely attributable to substantial net sales abroad ($1316 million) by provincial government enterprises.

The Government of Canada had net sales of marketable bonds of $1458 million, compared with $1786 million in the same period the year earlier. $800 million of the new placements had extendible features. Net redemptions of Canada Savings Bonds, which are not included in these figures, amounted to $611 million, despite the increasing of the annual coupon rate to 18.5% for the period August 1st to October 31st 1981. As a result of the encashments, $14097 million were outstanding at the end of the quarter, amounting to only 14.4% of the federal government's liabilities.

During the third quarter, the federal government announced that the new series of Canada Savings Bonds, to be dated November 1st 1981, would carry a

coupon rate of 19.5% for the initial year, with the succeeding six years carrying a minimum coupon of 10.5% but which rate may be adjusted upwards, depending on rates available on similar instruments.

Non-residents acquired $2721 million (or 46%) in net purchases of Canadian marketable bonds, partly the result of the widening of the yield differential between Canada and the United States. For example, the yield differential between long-term debt of the government of Canada and the United States Government rose from about 200 basis points in June to reach almost 400 basis points in July, and remain high for the rest of the quarter. Bonds of other issuers saw the yield differential widen comparably. There was, therefore, a considerable advantage for borrowers to place bonds abroad (discounting for any further depreciation in the exchange rate), thereby bringing foreign currencies into Canada and offering support to the external value of the Canadian dollar.

A zero coupon bond was offered during the quarter but it was subsequently withdrawn as a result of an interpretation by the Department of National Revenue of the tax treatment of the interest.

Stocks

Stock markets in North America in the third quarter reflected the performance of their respective economies: the Toronto Stock Exchange Composite Index of 300 Stocks fell 20%, to close the quarter at 1,883.4, its lowest monthly closing since April 1980. Among the more heavily traded sectors, oil and gas fell 30%, paper and forest products 27%, metals and minerals 20%, and merchandising 20%. The Standard and Poor's Composite Index of 500 Stocks fell 10%.

The depressed state of stock markets seemed to deter many corporations from placing new equity issues, for, despite net sales of $2930 million in equities during the quarter (compared with $1134 million in the same period of 1980) the figure was swollen by two special and very large stock issues by two holding companies. Massey Ferguson Limited refinanced a large part of its debt by a share issue (which was, in part, guaranteed by the federal and Ontario governments) while a new holding company, Brascade Resources Inc., was created to acquire a major shareholding in Noranda Mines Limited.

A new type of financing instrument was introduced in the period under review: short-term preferred shares. These instruments have a maturity of between 30 and 360 days.

Mortgages

Net new mortgage financing amounted to $2206 million, the lowest third quarter figure for seven years. The weakness of this segment of the capital market reflected the record interest rates in the quarter, which reached 22% on a conventional mortgage. The housing market reacted to these developments, with housing starts falling from a seasonally adjusted annual rate of 223,800 starts average for the second quarter to 178,300 in the third quarter. The comparable figure for the third quarter of 1980 was 158,500 starts, when mortgage rates were seven percentage points lower. The lower number of starts in the third quarter of 1980 may have been attributable to a number of factors, one of which may have been a lagged reaction to (then) unprecedented mortgage rates in the second quarter of 1980. During that time, the rate had reached 17%, substantially above any previous peak. The psychological effect on homebuyers and homebuilders may have been proportionately much greater by dint of the initial shock. Given an apparent one period lag, a further drop in housing activity in 1981 and 1982 can be anticipated. (Starts in October were the lowest seasonally adjusted annual rate for two decades — 107,000).

Mortgage loan companies provided the bulk of mortgage funds ($1333 million) reflecting the transfer of this type of business from the chartered banks to their mortgage subsidiaries. Bank mortgages outstanding fell $959 million; the drop would have been much longer had not one of the real estate investment trusts been bought by one of the banks. Trust companies net new mortgages amounted to $114 million, the weakest third quarter since 1968.

Consumer Credit

Consumer credit outstanding increased $1274 million in the quarter, compared with $2020 million in the previous quarter and $1026 million in the third quarter of 1980. Banks loaned the bulk of the funds ($941 million) with life insurance companies providing $145 million, as policyholders continued to take advantage of clauses entitling them to low interest loans. Trust companies saw very little growth in their consumer loan portfolio ($15 million) while credit unions consumer loans outstanding fell some $18 million.

The weakness in consumer credit became increasingly apparent as interest rates rose and the economy weakened, especially expenditures on durables. ■

[1]The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census, see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506 [2]Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3]Includes logging, fishing, trapping and hunting [4]Includes mechanical and construction. [5]Includes a small number in non-specified occupations. [6]Beginning with 1978 includes fiancés and fiancées. [7]Does not include students entering Canada on students' visas. [8]Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are included with spouses.

[1]Excludes profits (net of losses) of government business enterprises. [2]Includes the withholding tax applicable to this item. [3]Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4]Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5]Includes net income of independent professional practitioners. [6]See footnote 4, Table 1.2.

[1]Includes defence expenditures. [2]Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3]Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4]The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5]See footnote 4, Table 1.1.

[1]The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1]Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2]Tax liabilities. [3]Withholding taxes. [4]The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

[1]These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

[1]The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group [2]The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

[1]"Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2]Annual figures are averages of 12 months. [3]Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4]Trainees on courses approved by Canada Employment and Immigration Commission.

[1]Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2]The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3]The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4]The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5]Includes publishing and allied industries. [6]Includes storage and communication industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3]Includes storage, electric power, gas and water utilities. [4]Excludes domestic service.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1]See footnote 1 and source in Table 10. [2]Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4]Except machinery and transportation equipment industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

[1]These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1974. [2]With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures used in the compilation of city indexes conform to those of the Canada indexes.

Section 6 · Manufacturing

68 1. Total Inventories, Shipments and Orders in Manufacturing
69 2. Manufacturing Shipments by Industry
71 3. Manufacturing Inventories by Industry
73 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
74 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
75 6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
76 7. Tobacco and Beverages
76 8. Rubber
77 9. Footwear
78 10. Production of Sawn Lumber
78 11. Pulpwood, Wood Pulp and Newsprint
79 12. Primary Iron and Steel
80 13. New Motor Vehicles
81 14. Production of Motor Vehicles in Canada
82 15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)[1]

Annual average and month	Shipments	New orders received during month[2]	Unfilled orders at end of month	Inventory at end of month						Ratio of inventories owned to shipments
				Owned[3]	Held but not owned	All inventory held				
						Total	Raw materials	Goods in process	Finished products

[1]Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2]Shipments of goods manufactured within the establishments. [3]Total new orders received during the period at estimated selling value, net of cancellations. [4]Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.
Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

[1]Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned							Inventories held: raw materials						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export based industries	Supplementary classification: automotive products

[1]Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2]Intended for cigarettes. [3]Includes pipe, plug, chewing, twist, snuff etc. [4]Sales to wholesalers, retailers and institutions which are subject to excise duty. [5]Includes sales for ships' air stores, embassies of Canada and for export. [6]End of period.

[1]Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2]Total pulp production covers "screenings" which are already included in exports "Screenings" are excluded throughout from mechanical and chemical pulp. [3]Customs exports. [4]Mill shipments destined for export.
Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

[1]Data compiled according to the Steel Distribution Index revised January, 1964. [2]Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3]Excluding shipments for re-processing at maker's own plant. [4]Data compiled as submitted by the steel producers according to the steel industry distribution code.

[1]Gas types are included. [2]Includes producers' shipments for export. [3]In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4]End of period. [5]Electric and other. [6]Excludes apartment type machines. [7]Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
[1]Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2]Includes crude oil, condensate and pentanes plus. [3]Gross new production by field less field flared and waste.

[1]Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2]Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3]Includes stove oil, kerosene. [4]Includes aviation gasoline and aviation turbo fuel. [5]Includes propane and propane mixes and butane and butane mixes. [6]Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products.

[1]A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

[1]Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2]1977 and 1978 price indexes are subject to revision. [3]1978 price indexes are subject to revision. [4]Farm share only of motor vehicles. [5]The major groups include additional components than the selected ones shown.

Column numbers refer to Tables 3 and 4, Section 11. [2]Includes special transaction-trade, not shown separately [3]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months [4]Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

Column numbers refer to Tables 3 and 4, Section 11. [2]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3]Includes special transaction-trade, not shown separately. [4]Includes scrap. [5]Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp. Drilling, excavating and mining (68) now include oil and gas field machinery. Mechanical power transmission equipment (72) now exclude special industry machinery.

[1]Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2]Cargo includes air freight and express but excludes mail and excess baggage.

[1]Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2]Daily averages for period. [3]Mainly deposits of foreign banks. [4]Capital, rest fund and undivided profits as at the latest fiscal year-end. [5]Including issues payable in foreign currency. [6]Excluding Canadian day-to-day loans. [7]Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8]Loans to grain dealers and exporters. [9]Loans to finance purchase of Canada Savings Bonds at time of issue. [10]Including loans to instalment finance companies. [11]These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1]This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2]Seasonally adjusted data for Saskatchewan is not available.

[1]Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2]Total new settled-for ordinary sales in Canada. Total sales figure does not include sales for Northwest Territories. [4]Under new or amended contracts.

[2]This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [3]Beginning in December 1973, this category includes oil export tax. [1]March includes supplementary payments arising from the closing of the accounts.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index— $7.

This Index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory— $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following Statistics Canada staff members:
G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
— Director General, Content and Analysis Branch
— Director, Financial Flows and Multinational Enterprises Division
L.O Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
Editor-Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Monthly or quarterly data may not add to totals due to rounding.

Gross National Product
Fourth Quarter 1981[1]
Advance Information

Gross National Product rose 2.5% in the fourth quarter of 1981, to reach a level of $340.8 billion seasonally adjusted at annual rates. Allowing for price change, real output declined 0.5%, after falling 0.9% in the third quarter, and ended the year at about the same level attained in the opening quarter.

At the time of the third quarter, expenditure on consumption, fixed investment and exports fell faster than production, and inventories accumulated. In the fourth quarter there was some recovery in a number of major demand components and, as production continued to fall and imports plummetted, inventories were sharply run down. These events are usually important to any recovery from recession, but whether the economy is now at or near bottom is far from clear. There is some evidence that prices have begun to moderate, and as personal incomes have been rising fairly strongly in recent quarters, both factors may help to stimulate demand. At the same time, key sectors of the economy, automobiles and housing for example, are very weak, while profits have fallen broadly and precipitously over the past three quarters and may act to restrain fixed investment in 1982.

The implicit price index for GNE rose 3.0% in the quarter compared to 3.2% in the third quarter. Much of the increase, however, was due to changing spending patterns, particularly to the large drop in imports, which obscured an easing of inflation in the fourth quarter that is not evident in the overall implicit price index. Prices of virtually all major components of expenditure decelerated during the quarter, notably, the implicit price index for consumer goods and services which, led by a substantial easing of prices for non-durables, decelerated from 2.9% to 2.0%.

Real personal expenditure on goods and services was little changed in the fourth quarter, as spending on durable goods fell 1.1% from the previous quarter's depressed level; the declines were particularly marked for cars, furniture, and appliances. The efforts of retailers to restrain price increases to move unwanted stocks was most evident in sales of semi-durable goods, which were up 0.5%.

Business investment in residential construction fell 10.8% in constant dollar terms, nearly matching the third quarter decline. The source of weakness shifted from the resale market, which slumped in the third quarter when mortgage rates surpassed 20%, to work-put-in-place, reflecting the extraordinarily low level of housing starts since mid-year. The large drops in the third and fourth quarters leave total spending on residential construction at its lowest level in over a decade.

Real business investment in plant and equipment rose 3.6%, led by a sharp 4.9% upturn in non-residential construction. This increase is striking in the light of the deterioration of the financial position of corporations and the drop in capacity utilization. Part of the increase may be attributable to the end of strikes but much of it represents an on-going industrial restructuring in response to rising energy costs in Canada.

Inventories fell $652 million in constant dollars, a substantial reversal from the $1676 million increase last quarter. The reduction was confined to the retail sector, largely reflecting the sales incentives and production cutbacks designed to re-align stocks in the motor vehicle industry. In manufacturing, there was overall accumulation, particularly in primary metals, electrical products and paper, due in part to strike settlements and in part to slack demand in the United States.

The nominal trade balance in goods and services[2] improved by $8100 million, as exports rose slightly and imports fell sharply. Real merchandise imports fell much more sharply than aggregate demand, declines were widespread, but the largest drops occurred in motor vehicles and parts and crude petroleum. Real merchandise exports were resilient, by contrast, considering the continued weakness in the United States economy, rising by 0.4% in the quarter. A

[1] As has happened during previous periods of high economic volatility, the data problems encountered in compiling the G.N.P. estimates for the fourth quarter of 1981 suggest that subsequent revisions may be larger than normal. Readers are therefore asked to bear this in mind when interpreting movements among the components.

recovery in exports to Europe and Japan also helped to buttress exports.

Wages, salaries and supplementary labour income rose 2.6% in the quarter, as steady growth in average earnings more than offset the effects of mounting layoffs. Income gains were particularly strong in the forestry industry and postal services as a result of strike settlements, while growth was sluggish in manufacturing and trade.

The fourth quarter decline in corporation profits was 8.3%, following declines of 15.3% in the third and 5.0% in the second quarters. The reductions were widespread with the largest drops in the mining and manufacturing industries.

Total government revenue, excluding intergovernmental transfers, increased 0.5% in the fourth quarter following a growth of 2.7% in the third quarter, reflecting declines in federal indirect tax revenues and corporate tax liabilities. Total government expenditure increased 2.9% in the fourth quarter, following an increase of 5.1% in the third quarter. The government sector deficit, on a national accounts basis, increased from $2.9 billion in the third quarter to $6.2 billion in the fourth quarter.

1981 Annual

Gross National Product increased 13.3% to a level of $328.5 billion in 1981. In real terms, output rose 3.0% but all of the gain occurred in the first six months, with the economy declining in the second half of the year. Annual growth of real GNP in the past five years has been consistently below the post-war average, as over this period the effects of the devaluation of the Canadian dollar and the boom in business investment have been substantially offset by relatively weak household and government spending, and the consequences of rapid inflation and rising interest rates both in Canada and in most of the major industrialized nations.

Overall prices, as measured by the implicit price index for GNE, rose about 10% for the third consecutive year. This does not convey, however, the recent slowdown in prices evident towards the end of the year, reflecting an easing of inflation in world commodity markets for exports, an easing of imported inflation, and the consecutive recessions suffered by the domestic economy in the last two years.

Consumer demand recorded its fifth consecutive year of weak growth, rising 1.7% in volume. Spending on durable goods, especially passenger cars and appliances continued to be restrained by high interest costs, while higher prices dampened consumption of energy-related non-durables. Demand for semi-durable goods was stimulated 2.8% by the evident restraint in prices, up only 7.7%, while consumption of services grew steadily despite a further curtailment of travel abroad.

Expenditures on residential construction in real terms edged up by 1.4% in 1981, although the housing market demonstrated great instability over the course of the year. The behaviour of housing activity displayed resilience to the inhibiting effect of high mortgage rates early in the year before abruptly turning down in the second half of the year. The gains early in the year interrupted nearly four years of unbroken declines, although these increases were more than reversed by year-end to leave the share of housing as a percentage of GNE devoted to housing at 3.7%, the lowest level in the post-war period.

Business investment in plant and equipment rose 18.2% in current dollars, and its share of output has risen from 13.7% in 1978 to 16.8% in 1981. The volume of non-residential construction was up 8.4% while outlays for machinery and equipment increased 5.6%. Strong gains in mining, manufacturing, utilities and commercial building led the advance, offsetting a slowdown in oil and natural gas exploration and development. Investment growth was particularly strong in energy-intensive industries such as paper and petrochemical plants, as well as pipelines and electric power.

Business real non-farm inventories rose $592 million in 1981 after a $562 million reduction in 1980. Stockbuilding rose most significantly in the manufacturing industries, notably primary metals, transportation equipment, electrical products and paper.

The deficit in trade on goods and services widened from $3185 million in 1980 to $8178 million in 1981, with most of the deterioration originating in the non-merchandise component. A high level of interest and dividend outflows, partly attributable to the large number of re-patriations of foreign-controlled enterprises, accounted for most of this reversal. The merchandise trade balance slipped by $1174 million, as the terms of trade fell by over 3%, with exports rising 10.5% and imports by 12.9%. Most of the gain in exports reflected strong United States demand early in 1981, particularly before the housing and auto markets collapsed.

Wages, salaries and supplementary labour income gained 13.8% in 1981, which served to maintain labour income's share of GNP at about 56%. The growth of total employment moderated although there was a more marked downturn in labour market conditions at year-end. Average weekly earnings rose 12.1%, and unit labour costs were boosted by a further erosion of output-per-person employed. The year was also marked by a sharp increase in labour unrest, particularly in the forestry, communications, and manufacturing industries.

Corporation profits before taxes fell about 9% in 1981 following a sluggish performance in 1980, as weak markets, rising finance charges, and increased labour costs eroded profits in most major industry groups. The largest declines occurred in mining, retail, transportation and manufacturing industries.

Total government revenue, excluding intergovernmental transfers increased by 19.7%. Indirect taxes rose 27.5%

[2]These estimates will be presented in greater detail in the Balance of Payments information bulletin.

largely as a result of higher federal revenues from petroleum-related taxes. Total government expenditure grew by 15.5%. The largest contributors to this growth were current expenditures on goods and services which increased by 14.3% and interest on the public debt which grew by 30.5%. With total revenue increasing at a greater rate than total expenditure, the total government deficit, on a national accounts basis, declined by $3.8 billion to a level of $2.2 billion. ■

In 1981, Gross National Product increased 13.3% to a level of $328.5 billion. In real terms, output rose 3.0%.

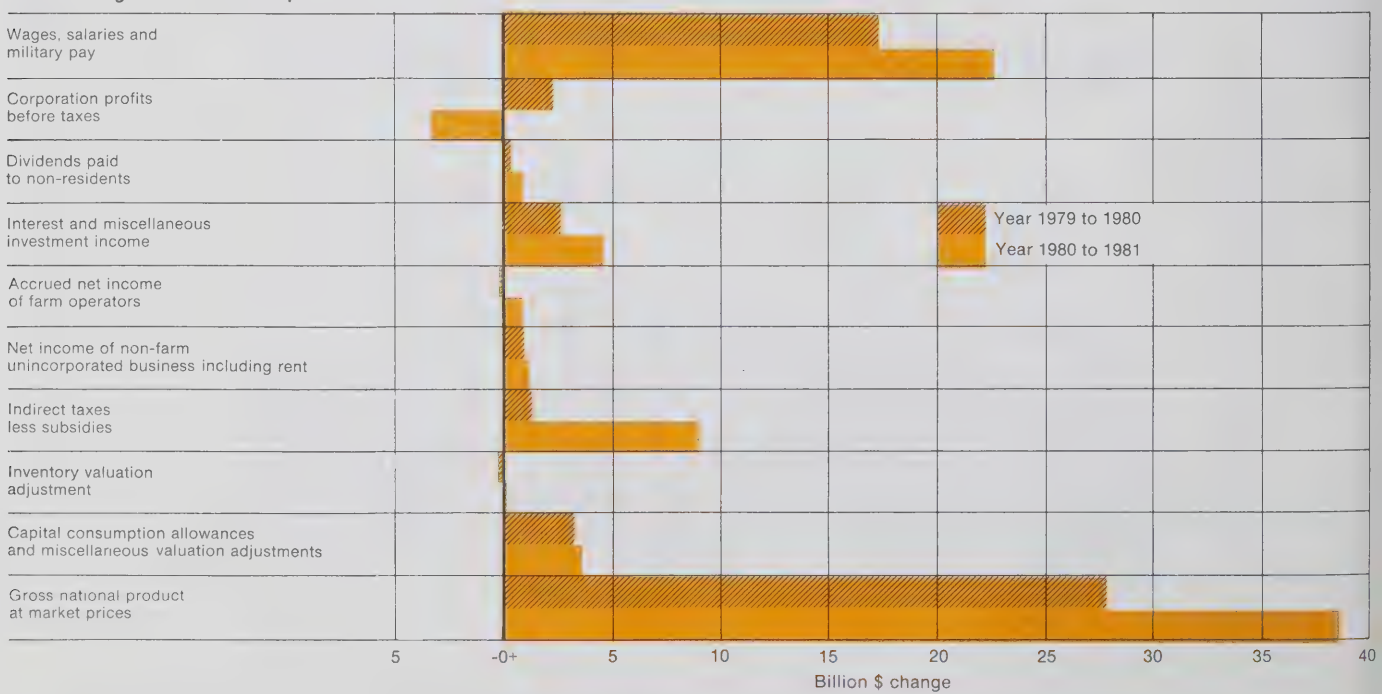

Gross National Product, seasonally adjusted at annual rates rose to $340.8 billion in the fourth quarter of 1981, an increase of 2.5%. After allowing for price change, real output declined 0.5% after falling 0.9% in the third quarter.

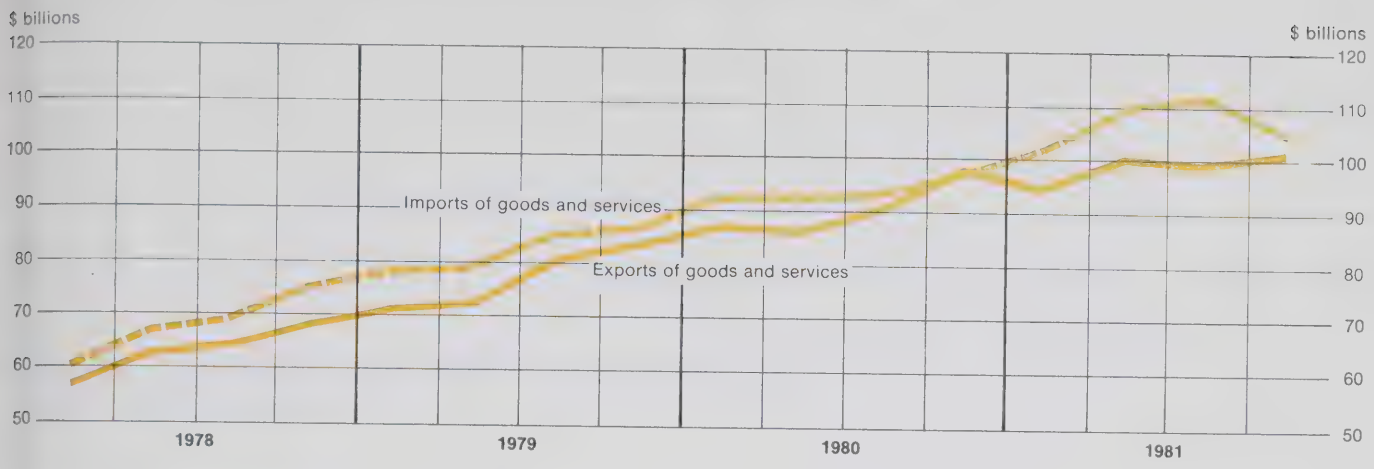

Wages, salaries and supplementary labour income and military pay increased 13.8% in 1981. Corporation profits declined 8.9%. Indirect taxes less subsidies rose 31.0% while interest and miscellaneous investment income increased 20.9%.

Annual changes in GNP and components

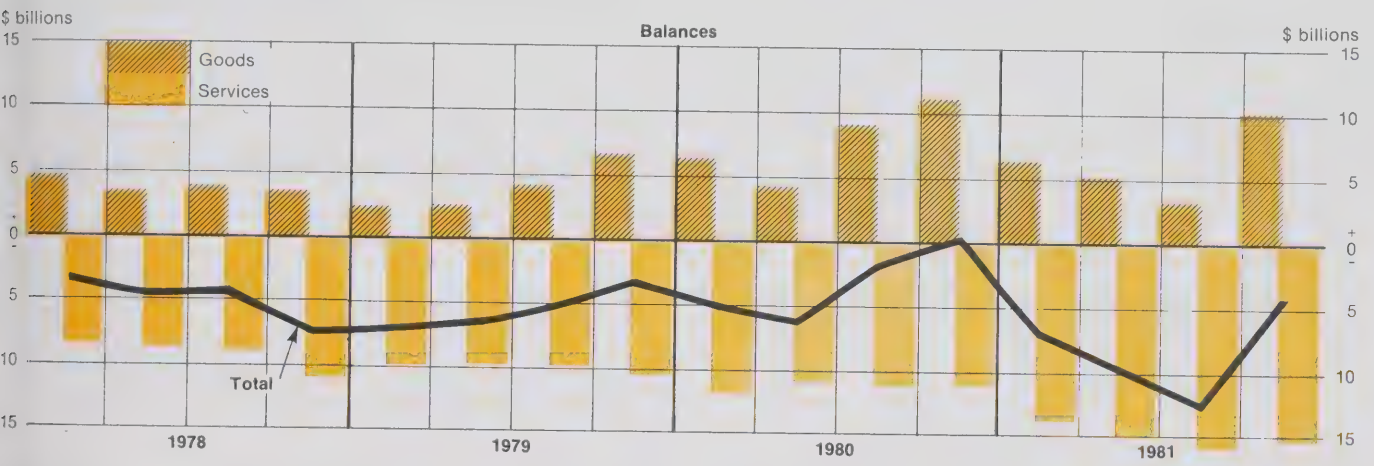

Note: All quarterly data adjusted for seasonal variation and at annual rates

In 1981, exports of goods and services increased 9.7% while imports rose 14.7% resulting in a deficit of $8.2 billion compared to a deficit of $3.2 billion in 1980 with most of the deterioration originating in the non-merchandise component.

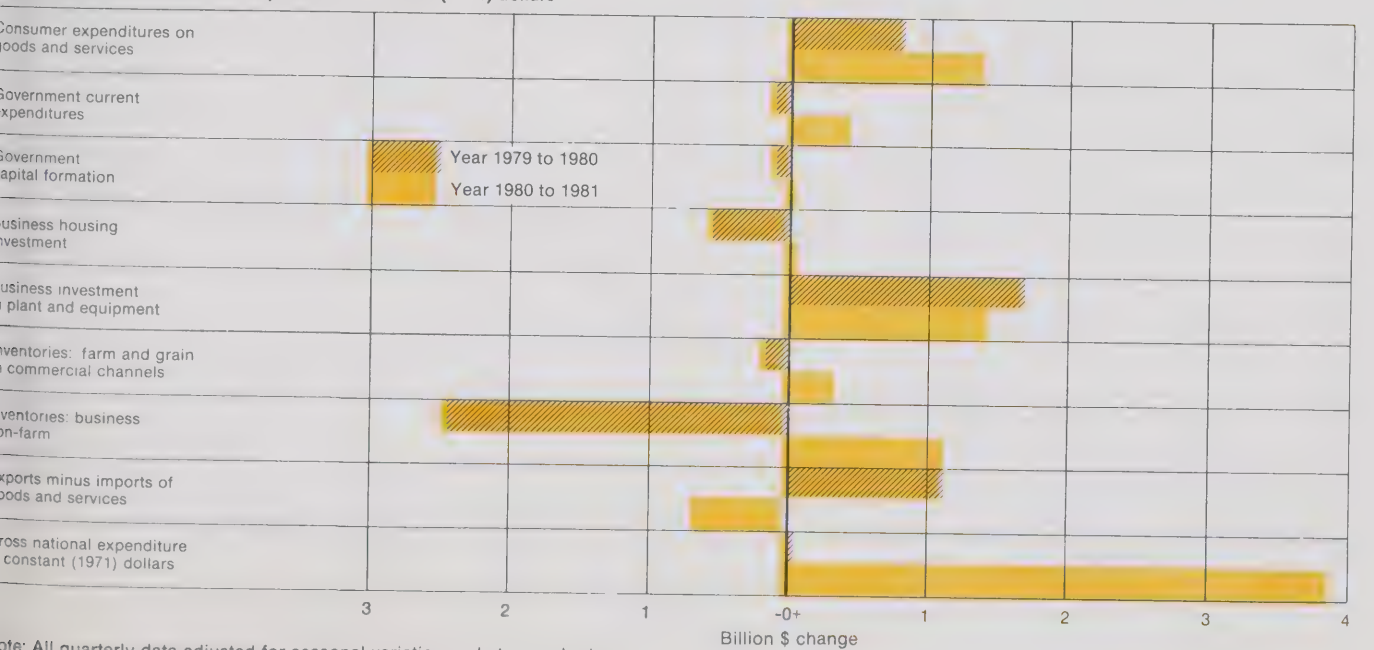

In the fourth quarter of 1981, exports of goods and services increased 1.2% while imports declined 6.2%; the balance of trade in goods and services improved by $8.1 billion over the previous quarter.

Final domestic demand strengthened somewhat in 1981, although demand continued to be weak in the consumer and housing sectors. Outlays for plant and equipment continued to rise. Business investment in inventories increased after substantial liquidation in 1980.

Annual changes in GNE and components in constant (1971) dollars

Note: All quarterly data adjusted for seasonal variation and at annual rates.

[1]The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2]Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3]Includes logging, fishing, trapping and hunting. [4]Includes mechanical and construction. [5]Includes a small number in non-specified occupations. [6]Beginning with 1978 includes fiancés and fiancées. [7]Does not include students entering Canada on students' visas. [8]Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiances and fiancées are included with spouses.

Section 3 · System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Real Domestic Product by Industry of Origin, Quarterly
27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

[1]Excludes profits (net of losses) of government business enterprises. [2]Includes the withholding tax applicable to this item. [3]Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4]Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5]Includes net income of independent professional practitioners. [6]See footnote 4, Table 1.2.

[1]Includes defence expenditures. [2]Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3]Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4]The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5]See footnote 4, Table 1.1.

[1]The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1]Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2]Tax liabilities. [3]Withholding taxes. [4]The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

4	263.5	333.8	256.0	245.1	308.9	314.4	293.8	296.2	255.4

[1] These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

[1]The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group [2]The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

[1]"Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2]Annual figures are averages of 12 months. [3]Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments.[4]Trainees on courses approved by Canada Employment and Immigration Commission.

[1]Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2]The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3]The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4]The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5]Includes publishing and allied industries. [6]Includes storage and communication industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3]Includes storage, electric power, gas and water utilities. [4]Excludes domestic service.

[1]See footnote 1 and source in Table 10. [2]Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4]Except machinery and transportation equipment industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]In addition to those listed, tobacco products; knitting mills, printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

[1] These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1974. [2] With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures used in the compilation of city indexes conform to those of the Canada indexes.

[1]Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2]Shipments of goods manufactured within the establishments. [3]Total new orders received during the period at estimated selling value, net of cancellations. [4]Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

[1]Total inventories owned by manufacturers including warehouse stocks.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 4: Estimated value of shipments and unfilled orders in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Shipments[1]							Unfilled orders at end of month						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export-based industries	Supplementary classification: automotive products

Separate industries series combined for the Supplementary Classification automotive products, are also components of other classifications. Other economic use classification groups are mutually exclusive and except for rounding differences add to relevant Canada totals in section 6, table 1.

Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 5: Estimated value of inventories owned and raw materials in manufacturing industries, by economic use classification, based on the 1970 standard industrial classification (million dollars)

Annual average and month	Inventories owned							Inventories held: raw materials						
	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods & supplies	Export-based industries	Supplementary classification: automotive products	Consumer goods		Machinery and equipment	Construction materials and components	Other intermediate goods and supplies	Export based industries	Supplementary classification: automotive products

[1]Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2]Intended for cigarettes. [3]Includes pipe, plug, chewing, twist, snuff etc. [4]Sales to wholesalers, retailers and institutions which are subject to excise duty. [5]Includes sales for ships' air stores, embassies of Canada and for export. [6]End of period.

[1]Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2]Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3]Customs exports. [4]Mill shipments destined for export.

Data compiled according to the Steel Distribution Index revised January, 1964. [2]Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3]Excluding shipments for re-processing at maker's own plant. [4]Data compiled as submitted by the steel producers according to the steel industry distribution code.

[1]Gas types are included. [2]Includes producers' shipments for export. [3]In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4]End of period. [5]Electric and other. [6]Excludes apartment type machines. [7]Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2]Includes crude oil, condensate and pentanes plus. [3]Gross new production by field less field flared and waste.

[1]Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2]Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3]Includes stove oil, kerosene. [4]Includes aviation gasoline and aviation turbo fuel. [5]Includes propane and propane mixes and butane and butane mixes. [6]Includes petro-chemical feed stocks, naphtha specialities, coke, lubricating oil and grease, still gas and other products.

[1] A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences.
[1]Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2]Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3]Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4]Includes new and existing commercial structures and farm property.

[1]Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2]1977 and 1978 price indexes are subject to revision. [3]1978 price indexes are subject to revision. [4]Farm share only of motor vehicles. [5]The major groups include additional components than the selected ones shown.

[1]Column numbers refer to Tables 3 and 4, Section 11. [2]Includes special transaction-trade, not shown separately. [3]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4]Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

[1]Column numbers refer to Tables 3 and 4, Section 11. [2]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3]Includes special transaction-trade, not shown separately. [4]Includes scrap. [5]Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

[1]Data for 1970 through 1972 refer to 24 class 1 and 2 carriers whose gross annual revenues totalled $500,000 or more. Commencing January 1973, only 6 major railways (accounting for 95 per cent or more of the total operating revenues) are shown.

Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2]Cargo includes air freight and express but excludes mail and excess baggage.

[1]Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2]Daily averages for period. [3]Mainly deposits of foreign banks. [4]Capital, rest fund and undivided profits as at the latest fiscal year-end. [5]Including issues payable in foreign currency. [6]Excluding Canadian day-to-day loans. [7]Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans [8]Loans to grain dealers and exporters. [9]Loans to finance purchase of Canada Savings Bonds at time of issue. [10]Including loans to instalment finance companies. [11]These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1]This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2]Seasonally adjusted data for Saskatchewan is not available.

Note: Components may not add to totals due to partial revisions.

[2]End of period. [3]Excluding Treasury Bills, Canada Savings Bonds and other non-market issues. [1]Figures are subject to revision. Series cover all publicly announced issues and some private placements not publicly announced. Notes with an original term to maturity of over one year. [4]Includes Canadian Pension Plan series bonds issued by the provinces and their agencies and purchased by the C.P.P. Investment Fund. [7]Consists of issues of Canadian religious and other institutions and Canadian dollar issues of foreign debtors. [8]Allowance for the take-over of Nova Scotia Light & Power common shares.

[2]This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [3]Beginning in December 1973, this category includes oil export tax. [1]March includes supplementary payments arising from the closing of the accounts.

Section 14 · Selected Social Data

Table 1: Number, percentage change and rate of murder offences and incidents, Canada, 1974-1980

Year	Murder Offences [1]			Murder Incidents [2]		
	Number	Percentage Change	Rate [3]	Number	Percentage Change	Rate [3]
1974	548	—	2.44	500	—	2.23
1975	636	16.06	2.79	569	13.80	2.50
1976	614	−3.46	2.66	561	−1.41	2.43
1977	628	2.28	2.70	575	2.50	2.47
1978	591	−5.89	2.51	554	−3.65	2.36
1979	587	−.68	2.48	537	−3.07	2.27
1980	493	−16.01	2.06	459	−14.53	1.92

[1] Murder offences include all offences of capital and non-capital murder and, as of July 26, 1976, first and second degree murder and murder where the type was not specified. One offence is counted for every victim by reporting police departments.
[2] The term 'incident' is used in referring to every single event in which homicide is committed, regardless of whether it involves one or more victims. Murder incidents include all incidents of capital and non-capital murder and, as of July 26, 1976, first and second degree murder and murder where the type was not specified.
[3] Rates are calculated on the basis of 100,000 population. The population figures are taken from census publications.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:
G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
— Director General, Content and Analysis Branch
— Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
Editor-Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Monthly or quarterly data may not add to totals due to rounding.

Gross Domestic Product

*Kishori Lal

Gross Domestic Product (GDP) is a concept which occupies a central place in Macro-Economics in general and in the System of Economic Accounts in particular. Just about every country publishes its GDP estimates. These estimates are regularly reported, even highlighted by the media. The United Nations puts together such estimates from all (almost all) countries and publishes them annually. Contributions to and foreign aid from International Organizations are partly determined with reference to an individual country's GDP. If a country's GDP falls, the pride of its citizens is hurt, its government may fall, its international credit rating may suffer. A general reader would expect a concept so central in Economics and so widely used nationally and internationally to be a precise measure. But it is not.

GDP can be defined as a measure of an unduplicated value of current production of an economy, with all duplications such as intermediate expenses, as well as inter-sectoral and intra-sectoral transfers eliminated. An example of such a transfer could be a payment of social security benefits to persons by the Government but this does not add anything to current production. And there is no unique definition of duplication except with reference to time, institutions, political set-up and (in practice) statistical development. In addition to these constraints, it is impossible to get a direct observation of each and every one of the myriad transactions made daily in any economy. The feasible numerical description resulting from collection, estimation, and imputation of all the transactions in an economy must remain somewhat abstract.

As noted, it is difficult to record all the myriad details of daily economic transactions. But even if one would be able to record them, the record will be bewildering. It is imperative and fundamental that the myriad transactions and the transactors be grouped into some "significant" categories so that one could see a "meaningful picture". Note that significant categories for one scholar or for one time or for one economy could be different from another scholar or another time or a different economy. Only the naive would accept at face value the regularly published international and intertemporal comparisons of GDP. This note gives only a flavour of some of the issues relevant to the subject of gross domestic product, particularly how to interpret it. Let me briefly go over the history of the recent methodological developments so that the present day measurement problems are put in a larger perspective.

Recent methodological developments

The Statistical Office of the United Nations has been very active in developing and presenting a set of guidelines for compiling economic accounts. In 1953, the United Nations originally published *A System of National Accounts and Supporting Tables* (or SNA for short). This was the first time that an international set of guidelines was published on the System of National Accounts. But we must recognize that the U.N. 1953 document was not produced in a vacuum. There was a long intellectual history behind it. Imagine that the first set of national income estimate was prepared for England by Sir William Petty in 1665. Many other scholars in other countries followed.[2]

The U.N. 1953 system was applicable (with modifications by individual countries) to market oriented economies such as U.S.A., Britain, Canada, India, etc. This system was not used by the centrally planned economies such as the Soviet Union, China, etc. During the next fifteen years, the original 1953 system was extensively revised and a new version of the SNA was published in 1968[3]. This version was completed under the able guidance of Professor Richard Stone of Cambridge University, England.

*Kishori Lal is the director of the Input-Output Division, Statistics Canada. Opinions expressed in this article are those of the author and are not to be attributed to Statistics Canada.

[2] John W. Kendrick in his book *Economic Accounts and Their Use* (New York, 1972, pp 10-19) gives an excellent summary of the histor of Economic Accounts.

[3] United Nations, *A System of National Accounts, Studies in Methods Series F, No. 2, Rev. 3*, New York, 1968.

Professor Stone has been very active in the theoretical and statistical developments in the general area of economic accounts, right from 1939 in England. In that year, the Chancellor of the Exchequer in Great Britain, under the influence of Keynes, authorized the preparation of national income estimates. Richard Stone and James Meade, with encouragement and detailed advice from Keynes, completed a set of national income and expenditure estimates for Great Britain which were published with the 1941 Budget.

Methodologically, the British estimates were significant in that national product was grossed to include depreciation allowances and net indirect business taxes, thus representing final output at market prices. Of more importance, the British White Paper of 1941 stressed the "national income and outlay account" idea. That is, income and expenditure were viewed as the two sides of a double entry production account for the entire national economy. National expenditure was thus finally established as a coordinate variable, which together with income was necessary as background for budget formulation as well as projections and broader policy formulation.

Comparable to the SNA, the United Nations launched a major effort to produce and publish similar guidelines, applicable to centrally planned economies such as the Soviet Union, China, etc. The United Nations published these guidelines under the heading *Basic Principles of the System of Balances of the National Economy*,[4] (also known as Material Product System or MPS for short). Thus, two systems, one SNA and the other MPS, are prevalent now to compile economic accounts. Another effort is going on now to provide guidelines for comparisons between the two systems. Conceptual relationships between the two systems have been delineated.[5] As well, statistical reconciliation is progressing between some European countries following SNA and MPS systems.

Another major effort is underway to produce international comparisons of gross product and purchasing power. As a result of work over the past two decades by national statistical offices, the United Nations and other international organizations, data on national income and expenditure are becoming more and more comparable from the standpoint of statistical methodology. However, even where standard methodology has been adopted to produce national estimates of these aggregates, a major limitation to comparability has been the inadequacy of official exchange rates for the purposes of converting estimates in national currencies to a common basis of valuation. The United Nations jointly with the World Bank initiated a project in 1968 to fill this important gap in international statistics by developing detailed inter-country comparisons for gross domestic product and the purchasing power of currencies. Only a handful of countries participated in the first round of this exercise. These results were published in 1975.[6] The results were dramatic for a country like India. For example, using the official exchange rate, India's per capita income was about one fiftieth of the U.S.A. but using the purchasing power parity methodology of the U.N. International Comparisons Project, it was only one fourteenth of the U.S.A. for the year 1970. The official exchange rate in that year was Rs 7.5 to a dollar but the purchasing power rate was calculated to be Rs 2.15 per dollar. The Statistical Office of the United Nations has given a high priority to the project. A second report was issued in 1978. It is quite possible that in the foreseeable future this new set of statistics would become a regular feature of the United Nations statistics. Note that Canada is now participating in this important new endeavour of the United Nations.

Three approaches to the measurement of GDP

There are three basic approaches to the measurement of economic production each of which yields an identical total. These are usually denoted as the income approach, the expenditure approach, and the net value added approach. A simple set of figures will illustrate the matter. Assume an economy in which all output is produced by three firms. Each firm sells its production to another firm for further processing or fabrication, or disposes of it in final markets as sales to final users (Table 1). Thus Firm 1, a grain producer, imports seeds and produces grains for sale to Firm 2, a Flour Mill. The Flour Mill sells a part of his output of flour in final markets (to consumers, governments, etc., who are the ultimate users of the product) and the balance to Firm 3, a bread manufacturer. The bread manufacturer in turn sells all of this production of bread to final users. In this example, each firm generates income only in the form of wages and salaries, and profits. For simplicity, it is assumed that there are no taxes, no depreciation, and no inventories:

From the basic data presented in Table 1, it is possible to measure the unduplicated value of production produced by these three firms in three separate ways. The first is simply to sum all of the factor incomes (wages and salaries, and profits) generated by this productive activity — incomes representing the returns to the labour and capital employed. The results of this summation are shown in Table 2:

[4] United Nations, *Basic Principles of the System of Balances of the National Economy, Studies in Methods, Series F, No. 17*, New York, 1971.
[5] United Nations, *Comparisons of the System of National Accounts and the System of Balances of the National Economy, Part 1, Conceptual Relationships, Studies in Methods, Series F, No. 20*, New York, 1977.

[6] Irving B. Kravis and others, *A System of International Comparisons of gross product and purchasing power*, United Nations International Comparison Project Phase 1. Baltimore, 1975

A second approach is to sum all sales which these firms have made to final users — to consumers, to governments, to business on capital account, or in export markets. This approach also provides an unduplicated measure of the total value of production produced by these three firms. Imports, of course, have to be deducted from this summation (as in Table 3) since imports are implicitly included in these final sales and should not be counted as a part of domestic production — they represent part of the production of a foreign country. Sales from one firm to another (intermediate production) are not counted since to do so would involve double counting, all intermediate production being embodied in final output sold to final users. (In this particular example, all output is assumed to be sold, and none accumulates in the form of unsold inventories). It can be seen that this "sales to final users" approach (or "sum of expenditures" approach) yields the same value of production as the "sum of incomes" approach:

Finally, the unduplicated value of production can be measured by taking the gross value of production of each firm and subtracting from this each firm's costs of production in the form of its purchases from other firms (including imports), to yield the "net value added" to production by the firm. Again, it can be seen from Table 4 that this procedure yields the same value of "unduplicated production" as is achieved under the first two approaches.

Table 1. Hypothetical Example of a Three-firm economy

Cost of Production	Millions of dollars	Gross value of production	Millions of dollars
		FIRM 1 (Grain Producer)	
Imports (seeds)	15	Sales to Firm (2 Grains)	100
Wages and salaries	60		
Profits	25		
TOTAL	100	TOTAL	100
		FIRM 2 (Flour Mill)	
Purchases from Firm 1 (Grains)	100	Sales to final users (flour to consumers, governments, etc.)	30
Wages and salaries	40	Sales Firm 3 (Flour to Bread manufacturer)	120
Profits	10	TOTAL	150
TOTAL	150		
		FIRM 3 (Boulangerie)	
Purchases from Firm 2 (Flour)	120	Sales to final users (Bread to consumers, governments, etc.	1,100
Wages and Salaries	900		
Profits	80		
TOTAL	1,100	TOTAL	1,100

Table 2. "Sum of Incomes" Approach

	Millions of dollars
Firm 1	60 + 25 = 85
Firm 2	40 + 10 = 50
Firm 3	900 + 80 = 980
Total incomes earned in current production (total value of production)	1,115

Table 3. "Sum of Sales to Final Users" Approach or "Sum of Expenditures by Final Users"

	Millions of dollars
Firm 1	—
Firm 2	30
Firm 3	1,100
Sub-total	1,130
Less imports	-15
Total sales of current Canadian production to final users	1,115

Table 4. "Sum of Net Values Added" Approach

	Gross value of production (1)	Purchases from other firms, or imports (2)	Net value added in production (3) (1-2)
Firm 1	100	15	85
Firm 2	150	100	50
Firm 3	1,100	120	980
Total	1,350	235	1,115

It is this approach which is primarily used in estimating Gross Domestic Product by Industry both by the Industry Product and Input Output Divisions in Statistics Canada. In some European countries, the national accounts are produced using the Input-Output approach. Input-Output Accounts not only produce value-added but as well produce final expenditures from the same data base. Total production can be used for intermediate use and/or for final uses and cost of production includes intermediate expenses and primary inputs (including profits). In this equation, intermediate expenses are common, hence final uses equal primary inputs. Primary inputs are nothing but the elements of the income approach above and the final uses depict elements of "Sum of Sales to Final Uses". This approach forces a joint and statistically equal calculation of the two sides of the unduplicated value of current production of an economy.

Gross Domestic Product (GDP) versus Gross National Product (GNP):

Some countries call their unduplicated production Gross Domestic Product while others call it Gross National Product. These are not identical terms. Here is the difference.

Residents of Canada may contribute to production in other countries by investing capital in those countries, which earns them a return. Similarly, non-residents may contribute to production arising within the geographic boundaries of Canada by investing capital in Canada which earns them a return. In the first instance, if the boundary of production is drawn to include all of the production of Canadian factors of production irrespective of what country the production originates in, the measurement is conventionally denoted as the "national product". In the second instance, if the boundary of production is confined to the geographic territory of Canada irrespective of whether the factors of production are resident (of Canada) or non-resident, the measurement is conventionally denoted as the "domestic product". For most practical purposes, the reconciliation between GDP and GNP involves the recording of transfer of interest and dividends across national borders. Normally, Canada's GDP will be higher than GNP because more foreign capital is invested here than Canada's capital abroad.

The revised U.N. System of National Accounts is built around the domestic concept. It is easier to reconcile with and aggregate the regional and provincial accounts to the acounts for the entire country on domestic basis than on national basis, precisely because there are no records kept for movement of interest and dividends across provincial boundaries within a given country. More and more countries are producing regional accounts. Another consideration is the prevalence of input-output tables in most countries. Input-Output tables depict production or industrial relations, hence are built around production statistics based on "establishment" records rather than "company" records. Establishmennt-base statistics record production data, inputs and outputs of commodities whereas company-based statistics record financial data such as profits (or losses), service expenditure, etc. Given these considerations, it is preferable to work with the domestic concept of production for the main accounts of an economy.

The growth rate of an economy could be different depending upon whether one measures it on domestic basis or national basis. This is particularly true in times of legal and politicl changes of administration or tax laws. When an economy's growth rate is published, one normally does not specify the conceptual intricacies (such as GDP versus GNP) to understand the reasons for growth or lack of it. Only a catch-all phrase, "growth of the economy" is bandied about which could be misleading.

GDP in constant prices

A time series of GDP expressed in current prices, that is the prices which obtain in the actual periods being measured, reflect two elements of change — changes in the quantities of commodities produced and changes in the prices attached to those commodities. The process of removing price change from the nominal values of transactions is referred to as deflation.

Certain characteristics of the deflation process should be noted at the outset. Deflation is essentially the construction of a model, or logical abstraction of actual transactions, and as such it has certain interesting limitations. The seemingly ideal approach to deflation would be direct mesures of quantity. However such measures are not additive. There is no meaningful way to combine tons of steel and dozens of oranges, for example. The only workable solution to this dilemma is to fix values for these quantities in terms of their prices at some point in time, the base year. Thus the dollar value of a quantity of oranges is additive to the dollar value of a quantity of steel. If all quantities are expressed in terms of their base-year prices, the constant price values for each commodity will be proportional to its quantities in different years, yet commodities of diverse characteristics will remain additive, and the construction of a set of accounts summarizing manifold transactions is possible.

The conventions just described leave one problem unsolved. It is easily observed that relative price changes for different commodities are not identical, and thus the relationship of the prices of diverse commodities will be different at different points in time. The ratio of the price of a litre of oil to the price of a shirt is quite different in the later 1970's than it was in the previous decade. If quantities of oil and shirt were to be combined, the importance of oil, or its "weight", if the quantities are valued in the prices of (say) 1976, will be much greater than if valued in 1961 prices. Thus it is important to note that trends in constant prices series which are summations of two or more commodities can be strongly influenced by the choice of the base year.

Given relevant price indices, one can convert current price series of final expenditures into constant price series. But on the Income side of the accounts, it is difficult to even visualize how to factor some of the

primary inputs into quantum and price. Imagine the construction of price indexes for profits and investment income!

In the absence of a direct measure of factoring primary inputs into quantum and price, a statistical technique, known as double deflation is applied. Double deflation is a technique whereby the constant price value-added of (say) an industry is inferred as the difference between the quantum of gross output and the quantum of commodity input of that industry, rather than being measured direct. Valued-added thus calculated for all industries is combined to arrive at GDP for the whole economy.

In the Input-Output Accounts, there is an inherent equality between value-added and final expenditure in current prices and the same equality prevails in constant prices. Value-added in constant prices must equal final expenditures in constant prices because the constant price intermediate use is common to both sides of the accounts. Double deflation technique must by definition result in this equality when applied to completely balanced Input-Output tables in current prices.

Interpretation of the GDP numbers

We have gone over some of the issues of interpretation of numbers on GDP. In this section let us summarize in one place the various signals that an economist should watch before making judgements on GDP numbers.

(i) GDP is not an observable phenomenon. It is a concept, a model. It is not a unique reality because it is not independent of the assumptions and conventions made and used by the investigator. That it is primarily an economic model should be kept in mind before making comments on GDP numbers.

(ii) It is true that most of the countries now use internationally published (both for SNA and MPS) conventions, definitions etc, but institutional rearrangements could lead to differences in growth rate though production activity has remained constant. For example it makes a difference in the level of GDP whether activities are carried out by government or by business. Thus for instance in a country where research and development activities are carried out largely by government institutions and the results of these activities are made available free of charge to enterprises, gross domestic product as defined in the SNA will be higher than in a country where these activities are carried out by private institutions and paid for by enterprises as a part of their costs.

(iii) We noted above that growth rates could be different when production is measured on GDP concept than GNP concept though both concepts measure an unduplicated value of production of an economy.

(iv) Constant price GDP or real growth of an economy is not independent of the base year that one chooses. Real growth between 1979 and 1978 could be different depending upon whether one is measuring it in 1971 prices or 1975 prices. Indeed constant price GDP is even more complex to interpret than current price GDP as it is a model twice removed from reality — first for current price GDP and then for the choice of a year for comparison.

(v) As noted above the international comparisons of per capita GDP or total GDP can't be adequately made using official exchange rate. One needs to develop purchasing power parity for countries to have a clearer idea of a growth of an economy. Presently published figures are inadequate.

(vi) International comparisons between countries using different accounting systems (SNA versus MPS) are simply not believable without a major research effort to convert one system to the other. For example, Soviet Unions' reported economic growth rate may be 5 percent and United States' 4 percent. It is impossible to say which country actually has a higher growth rate without putting both on the same system. Soviet Unions' material production might grow by 5 percent while the growth for non material production such as services — hospitals, education, government administration, professional services etc. — might be zero. These statistics give Soviet Unions' growth rate 5 percent on MPS but measured by SNA conventions, it might be only 3 percent compared to United States' of 4 percent on SNA. A great caution is needed to interpret results.

Concluding remarks

Three major issues, in addition to the many nuances of GDP, have been briefly touched in this note: international comparability of the two main systems of accounts, SNA and MPS; international comparisons of levels of output using purchasing power parity values rather than the official exchange rates; and removing price changes from the nominal values of producing a "quantum" measure of GDP. Underlying all these is an assumption of some kind of classification scheme for transactions and transactors. Classification is fundamental to any statistical compilation. Concordance of various (and sometimes conflicting) classifications in use for myriad transactions is a formidable challenge. This topic must be studied in depth by every economist interested in working with empirical results, otherwise one's perception remains vague and confusing.

[1]The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506.
[2]Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3]Includes logging, fishing, trapping and hunting. [4]Includes mechanical and construction. [5]Includes a small number in non-specified occupations. [6]Beginning with 1978 includes fiancés and fiancées. [7]Does not include students entering Canada on students' visas. [8]Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are included with spouses.

Section 3 - System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Real Domestic Product by Industry of Origin, Quarterly
27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

Year and quarter	Wages, salaries, and supplementary labour income	Military pay and allowances	Corporation profits before taxes[1]	Deduct dividends paid to non-residents[2]	Interest & misc. investment income[3]	Accr'd net income of farm operators from farm prod.[4]	Net income of non-farm un-incorp. business incl. rent[5]	Inventory valuation adjust.[6]	Net national income at factor cost	Indirect taxes less subsidies	Capital consump. allowances & misc. val. adj. [1]Excludes profits (net of losses) of government business enterprises. [2]Includes the withholding tax applicable to this item. [3]Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4]Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5]Includes net income of independent professional practitioners. [6]See footnote 4, Table 1.2.

[1]Includes defence expenditures. [2]Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3]Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4]The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5]See footnote 4, Table 1.1.

[1]The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1]Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2]Tax liabilities. [3]Withholding taxes. [4]The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

4	263.5	333.8	256.0	245.1	308.9	314.4	293.8	296.2	255.4

[1]These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

[1]The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2]The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

[1]"Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2]Annual figures are averages of 12 months. [3]Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4]Trainees on courses approved by Canada Employment and Immigration Commission.

[1]Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2]The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3]The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4]The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5]Includes publishing and allied industries. [6]Includes storage and communication industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3]Includes storage, electric power, gas and water utilities. [4]Excludes domestic service.

[1]See footnote 1 and source in Table 10. [2]Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4]Except machinery and transportation equipment industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

[1]These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1974. [2]With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures used in the compilation of city indexes conform to those of the Canada indexes.

[1]Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2]Shipments of goods manufactured within the establishments. [3]Total new orders received during the period at estimated selling value, net of cancellations. [4]Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.
Note: All series are subject to revision each year when more recent Census of Manufactures data become available.
Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), Statistics Canada.

Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)

Annual average and month	Total shipments	Non-durable	Durable	Foods and beverages	Tobacco products	Rubber	Leather	Textile	Knitting mills	Clothing	Wood

[1]Estimates of manufacturers' shipments are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers.
Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

Table 2: Manufacturing shipments[1] by industry based on the 1970 standard industrial classification (million dollars)/concluded

Annual average and month	Furniture and fixtures	Paper & allied industries	Printing publishing & allied industries	Primary metal	Metal fabricating (ex. machy. & transp. equip.)	Machinery	Trans-portation equipment	Electrical products	Non-metallic mineral products	Petroleum and coal products	Chemical & chemical products	Misc. mfgrg.

[1]Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2]Intended for cigarettes. [3]Includes pipe, plug, chewing, twist, snuff etc. [4]Sales to wholesalers, retailers and institutions which are subject to excise duty. [5]Includes sales for ships' air stores, embassies of Canada and for export. [6]End of period.

[1]Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2]Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3]Customs exports. [4]Mill shipments destined for export.

[1]Data compiled according to the Steel Distribution Index revised January, 1964. [2]Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included [3]Excluding shipments for re-processing at maker's own plant [4]Data compiled as submitted by the steel producers according to the steel industry distribution code

[1]Gas types are included. [2]Includes producers' shipments for export. [3]In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4]End of period. [5]Electric and other. [6]Excludes apartment type machines. [7]Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
[1]Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2]Includes crude oil, condensate and pentanes plus. [3]Gross new production by field less field flared and waste.

[1]Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2]Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3]Includes stove oil, kerosene. [4]Includes aviation gasoline and aviation turbo fuel. [5]Includes propane and propane mixes and butane and butane mixes. [6]Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

[1]A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences.
[1]Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2]Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3]Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4]Includes new and existing commercial structures and farm property.

[1]Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2]1977 and 1978 price indexes are subject to revision. [3]1978 price indexes are subject to revision. [4]Farm share only of motor vehicles. [5]The major groups include additional components than the selected ones shown.

Note: Components may not add to totals due to rounding and partial revisions.

[1]Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2]Includes loans on the security of household property. [3]Not available on a monthly basis. [4]Includes loans to finance companies which are affiliates of retail merchandisers. [5]Religious, educational, health and welfare institutions. [6]Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies.

[1]Column numbers refer to Tables 3 and 4, Section 11. [2]Includes special transaction-trade, not shown separately. [3]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4]Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

[1]Column numbers refer to Tables 3 and 4, Section 11. [2]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3]Includes special transaction-trade, not shown separately. [4]Includes scrap. [5]Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery. Mechanical power transmission equipment (72) now exclude special industry machinery.

[1]Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2]Cargo includes air freight and express but excludes mail and excess baggage.

[1]Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2]Daily averages for period. [3]Mainly deposits of foreign banks. [4]Capital, rest fund and undivided profits as at the latest fiscal year-end. [5]Including issues payable in foreign currency. [6]Excluding Canadian day-to-day loans. [7]Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8]Loans to grain dealers and exporters. [9]Loans to finance purchase of Canada Savings Bonds at time of issue. [10]Including loans to instalment finance companies. [11]These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1]This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2]Seasonally adjusted data for Saskatchewan is not available.

[1]This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2]Beginning in December 1973, this category includes oil export tax. [3]March includes supplementary payments arising from the closing of the accounts.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:
G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
— Director General, Content and Analysis Branch
— Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
Editor-Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

An Analysis of Hospital Expenditures in Canada

*Douglas E. Angus, Louis A. Lefebvre and Claude Strohmenger

ABSTRACT

Problem Addressed

Health economists and researchers have devoted much time and effort to estimating health care sector costs in Canada. In recent years, the proportion of GNP consumed by health services (between 7-7½ % throughout the 1970s) has underscored and stressed interest in this sector. Present and future distribution and use of resources allocated to medical treatment and hospital care have already been the objects of several studies in Canada, all of which indicate the need for in-depth analyses of health service costs and for establishing control and planning mechanisms in order to meet the future needs of the population.

Study of the economic cost of the health sector is itself an attempt to rationalize the expenditures and advantages resulting from this type of service. Obviously, this task is highly difficult for not only must we estimate direct costs but also indirect ones such as loss of income, or certain social costs associated with the quality of life. A major American study by Dorothy Rice and Barbara Cooper (1976) has shown that indirect costs can be as high as, if not higher than, direct costs.

It is important to evaluate the aggregrate cost of health in Canada, not only because of monetary considerations but more importantly because of questions of social priorities and human investment. Health service costs have often been perceived as an expenditure for the purpose of bringing a certain portion of the population to a satisfactory level of physical and mental well-being. With respect to medical services, Canada is one of the best equipped nations in the world. However, to achieve this, Canadians have been spending a substantial part of their income to finance a pan Canadian medical and hospital regime. Nearly half of these funds are absorbed by the hospital sector. In 1976, Canadian hospital operating expenditures amounted to more than $5.5 billion, representing 3.4% of GNP. These expenditures financed a variety of medical and paramedical services offered to the Canadian population.

In this study we examine the cost of medical services in terms of the principal categories of diseases treated in hospitals and as a function of the age group of medical service users. We attempt to determine what types of major illness occasioned the highest expenses and in what age groups the largest number of hospital service users were to be found. This allows us first to determine the treatment sectors in greatest "demand" and to identify the users' age groups, and, secondly, to present a complete table of the profile of use and relative significance of units of consumption.

Additional objectives of this study were: to estimate the short-run (1976-86) effects of demographic changes on total hospital expenditures; and, to attempt a calculation of the average hospital expenditures which might be generated during an individual's lifetime.

Methodology

Using hospital admission/separation data for 1976, the total number of days accumulated during that year by patients separated from a given hospital were disaggregated according to sex, eight age groupings, and the 18 major chapters of the International Classification of Diseases (I.C.D.).

*Douglas E. Angus, Louis A. Lefebvre and Claude Strohmenger
Research and Analysis Section, Health Division, Statistics Canada

From the annual returns of hospitals submitted by all general and allied special hospitals for 1976, we obtained total operating expenditures for each hospitals, as well as the total number of patient days during the year.

For each hospital, expenditures were allocated by sex and age groups to a diagnosis in proportion to the number of days of care attributable to the diagnosis. Thus we obtained an estimate of total hospital expenditures distributed by age and sex for the major I.C.D. classifications for hospitals where complete matches could be made. Data derived in this manner for each individual hospital were aggregated to provincial totals. Where information was not available, imputations using the provincial aggregates as a basis for distributing residual expenditures were made.

The projected hospital expenditures are based on a straight-forward calculation, i.e., for each age group the projected population for each year in the period 1976-86 was multiplied by the average expenses calculated in 1976 for the corresponding age group.

With respect to individual life-cycle hospital expenditures, we begin with a few basic assumptions. First, we assume a cohort of 100,000 people of each sex born in Canada in 1976. Next we assume that migration would not affect their number and that during different stages of their lives, they will be subject to the same risks of death as were observed at the corresponding ages during the period 1975-77.

What we have then is the framework of a model based on the longitudinal life table concept, which illustrates the life expectancy of a cohort subject to only one phenomen: mortality, the level of which is that observed during the 1975-77 period. From this model we obtain the total number of years the members of the cohort group would live and, since everyone will not die at the same time, the distribution of these years lived $L_{x,x+a}$ according to the age intervals $x,x+a$.

The average hospital costs for these people, broken down by sex and age, is based on those which are used for the projection period 1976-86, and, of course, are based on the same assumptions. These average per capita expenditures $C_{x,x+a}$ are expressed in constant (1976) dollars and kept constant throughout the life of the cohort.

Since these average costs represent, in fact, mean life year expenditures for the age groups considered, total hospital expenditures are at the termination of the cohort:

$$H = \sum_{x=0}^{\bar{\omega}} (C_{x,x+a}) \quad (L_{x,x+a})$$

where the average cost $(\bar{c})$ is:

$$\bar{c} = \left(\frac{1}{100{,}000}\right) .H$$

The Results

We have found such things as:

- In 1976, less than 9% of the population (65 + was consuming more than one-third of hospital resources. The 0-24 age group, which represented over 45% of the total population, accounted for only 24% of total hospital expenditures.
- Diseases of the circulatory system, accounting for more than $500 million each for males and females, are the most significant condition requiring hospitalization in Canada.
- The four most costly diseases/illnesses (circulatory system, accidents, poisonings and violence, digestive system, and neoplasms) account for almost one-half of total hospital expenditures.
- In 1976, slightly more than one-third of hospital expenditures were consumed by the 65 + age group; it is estimated that this group will utilize 40% of hospital resources in 1986. Costs for those 75 years of age and over will increase more rapidly than the total for all people 65 years and older.
- While population is expected to grow at an average annual rate of about 1%, the rate of increase in expenditures, everything else being equal, would be 1.5 to 2 times greater than population growth. This phenomenon is due primarily to changes in the age structure of the population.
- It is estimated that average hospital expenditures consumed in Canada during an individual's life cycle could be $22,000 for a male vis-a-vis more than $27,000 for a female, expressed in constant (1976) dollars.

Contribution

This analysis of hospital expenditures can be useful to planners and policy makers in the health care sector in determining priorities for health services and health research. Regarding the proportion of total hospital expenditures accounted for by the four leading disease categories (i.e., 46%), our study does comply with similar studies done in the United States (e.g., Rice and Cooper 1976). There also are similarities between this and the U.S. studies with respect to the effect that aging of the population can have on expenditures. Also of interest to policy makers is the observation that hospital expenditures for a given disease category can vary significantly by province. Finally, another interesting but relatively unexplored dimension of costs of illness presented in this study is the portrayal of lifetime hospital expenditures incurred by an individual.

Observations

The Health of Canadians

Introduction

Relatively adequate Canadian statistics have been available for many years to describe the principal causes of institutional morbidity and mortality as well as the utilization and costs of health care services. Much of this information is a by-product of the record-keeping by provincial health insurance plans, supplemented occasionally by special surveys on specific topics. Except for the occasional population survey, the information has focussed on only one part of the total health scene - the more extreme illness which comes to the attention of the health care system. While important, this perspective leaves significant areas untouched.

The Canada Health Survey (CHS) was intended to fill these gaps by providing statistics required for planning and evaluating health policies and programs which were not available in a comprehensive way from any other source. The CHS looked at three facets of health: (1) risk factors, (2) health status, and (3) consequences of ill health.

Three main types of risks to future health are probed in the CHS. These are lifestyle, biomedical and environmental. Lifestyle, in particular, lends itself to measurement in a household survey.

Health status, only partially the outcome of earlier risk exposure, has positive and negative dimensions which were measured for both physical and emotional health.

Because morbidity statistics have customarily been derived from health records which report single episodes rather than entire histories, it has been impossible to assess the personal burden of ill-health, especially for problems not reaching the health care system. The CHS rectifies this by identifying health problems and their consequences for each sampled individual, and using these to evaluate the impact of ill-health.

The CHS covered the civilian, non-institutionalized Canadian population, excluding residents to the territories, indian reserves and remote areas. The survey field work began in May 1978 in the eastern provinces, the central provinces in June, the remaining provinces in July, and was terminated in March 1979.

Summary of Findings

More men than women are exposing themselves to the risk of heart attack, lung cancer and accidents by indulging in heavy smoking and drinking. Four times as many men as women are heavy drinkers and twice as many are heavy smokers. This data is consistent with the known fact of higher mortality rates for men. However, with changing social mores, it has become increasingly acceptable for women to drink alcohol and to smoke. This is reflected in the figures that demonstrate that, for the population under 25 years of age, there is little difference in consumption between the sexes. Should this trend continue, there may be important changes in patterns of illness in the future.

Although the combination of birth control pills and smoking presents a much advertised risk of heart attack and stroke, women who take the pill are somewhat more likely to be smokers than those who do not take the pill.

On the positive side, the majority of the population does not smoke and nearly 4 million Canadians have been able to "kick the habit". Of those who do smoke, nearly one-third have made a real attempt to reduce their smoking in the previous year.

The study also measured fitness and levels of physical activity. Only one-third of Canadians are as active as they should be (based on Fitness Canada's "Prescription for Physical Activity") and only 40% enjoy

a recommended level of fitness. Women are not as active as men, at all ages. The survey indicated those who are fit are more likely to have lower blood pressure and their emotional health is generally much more positive.

Other positive health practices are also ignored or neglected by Canadians. Motor vehicle accidents are a major cause of hospitalization and premature mortality. Even though it has been proven that wearing seatbelt reduces the risk of death or serious injury, only 50% of the population uses them all or most of the time. A significant fact for policy makers to consider is that legislation does make a difference. In provinces with mandatory seat belt legislation, 60% of drivers and passengers report wearing their seatbelts. This figure is only 16% elsewhere.

Immunization is an effective means of preventing many serious illnesses and yet more than 4.5 million Canadians are susceptible to polio. While the survey did not provide the reasons, the proportion of the population which is susceptible is nearly twice as great in Québec as in the other regions.

Rubella or "German measles" is not a serious illness in itself, but it does have the potential to cause birth defects. The 237,000 women in their prime childbearing years (15-34 years) who are inadequately protected against rubella, therefore, are of concern.

The Pap smear and breast self-examination, are two accepted preventive mesures for women. Only 42% of women report having had a Pap smear during the previous year, and 21% have never had one. Sixty percent of women conduct breast self-examinations, although only 21% do so on a monthly basis. Almost half the women over 65 do not do this despite the fact that the risk of breast cancer increases with age. Women with a higher education are more likely to have both these tests indicating that health promotion and education efforts should be focussed on women with secondary school education or less.

One of the purposes of the survey was to determine the prevalence of health problems in the population and the impact that these have on the lives of Canadians. Heart disease, cancer, stroke, respiratory disease and accidents are well known as the major causes of death. The problems Canadians live with on a day to day basis, rather than die from, are quite different. They are, in order of prevalence: arthritis and rheumatism; back, limb and joint disorders; hay fever and other allergies; skin allergies and skin disorders; and dental trouble. Not surprisingly, the proportion of the population with at least one health problem increases with age; over 85% of the elderly (65 and over) report at least one problem.

The prevalence of health problems varies with income level. Those in the lowest income group experience a markedly higher proportion of mental disorders, heart disease, bronchitis and emphysema, whereas those in the highest income group are more likely to suffer from hay fever and other allergies.

Twelve per cent of Canadians experience long term disability as measured by a limitation of activity. The proportion of the population with long term disability increases with age, with the result that nearly 40% of the elderly report at least some functional limitation. Two per cent of the population, or nearly half a million Canadians, are so severely disabled that they cannot carry out a major activity such as work, school or housework. Of these, over 300,000 are in the 15-64 year-old age group.

With respect to short term illness, Canadians experience an average of 15.7 disability days per person per year. A disability day represents a day of short term illness during which an individual restricts his/her activities. Women have higher rates of disability days than men for all age groups. As is the case with long-term disability, the number of disability days increases with age, the elderly (aged 65 and over) reporting an average of 35 disability days per person per year.

On average, working persons miss 4.3 days a year because of ill health. For Canada, this amounts to 37 million working days per year. To put this in perspective, the total number of days lost because of strikes and lockouts in 1978 was 7.4 million.

In terms of mental health, those who report psychological distress are less often in good general health, are less likely to be physically active in their leisure time and more likely to use tranquilizers and sleeping pills.

During any given two day period 48% of the population take at least one drug (medicines, pills or ointments, birth control pills or vitamins). Of those taking drugs, 60% take at least one drug on the advice of a medical doctor, but 25% do not have an associated health problem. One quarter of women aged 65 and over take three or more different kinds of drugs simultaneously.

Although 76% of the population consults a medical doctor at least once a year, those with higher incomes are more likely to consult a health professional on a routine basis for check-ups and consultations.

The Canada Health Survey has given us a much clearer picture of the risks to which Canadians expose themselves and the lack of preventive measures taken, especially by some groups in our society. Thus it has identified target groups for future health promotion and prevention programs. Further, the health care system appears to be doing a good job overall in treating existing health problems in that the primary reasons given for not consulting a health professional about a specific health problem are that the problem is not considered serious enough or is thought to be under control. However, the survey has also identified the presence of chronic and degenerative health problems particularly among the elderly. This will have an increasing impact on demand for a wide variety of health and social services in light of the aging of the Canadian population.

Additional Information

The information presented in this article can do little more than hint at the wealth of detail that can be gleaned from the CHS database. Over one hundred

tables, together with accompanying analysis and discussion, are presented in the *Health of Canadians* (Statistics Canada catalogue number 82-538). Special tabulations can be obtained through the Health Division of Statistics Canada or by purchase of the CHS public use tape.

[1]The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. [2]Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3]Includes logging, fishing, trapping and hunting. [4]Includes mechanical and construction. [5]Includes a small number in non-specified occupations. [6]Beginning with 1978 includes fiancés and fiancées. [7]Does not include students entering Canada on students' visas. [8]Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are included with spouses.

Section 3 - System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Real Domestic Product by Industry of Origin, Quarterly
27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

Year and quarter	Wages, salaries, and supplementary labour income	Military pay and allowances	Corporation profits before taxes[1]	Deduct dividends paid to non-residents[2]	Interest & misc. investment income[3]	Accr'd net income of farm operators from farm prod.[4]	Net income of non-farm un-incorp. business incl. rent[5]	Inventory valuation adjust.[6]	Net national income at factor cost	Indirect taxes less subsidies	Capital consump. allowances & misc. val. adj. [1]Excludes profits (net of losses) of government business enterprises. [2]Includes the withholding tax applicable to this item. [3]Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4]Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5]Includes net income of independent professional practitioners. [6]See footnote 4, Table 1.2.

[1]Includes defence expenditures. [2]Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3]Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4]The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5]See footnote 4, Table 1.1.

[1]The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1]Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2]Tax liabilities. [3]Withholding taxes. [4]The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

[1]These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

[1]The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2]The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

[1]"Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2]Annual figures are averages of 12 months. [3]Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4]Trainees on courses approved by Canada Employment and Immigration Commission.

[1]Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2]The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3]The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4]The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5]Includes publishing and allied industries. [6]Includes storage and communication industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3]Includes storage, electric power, gas and water utilities. [4]Excludes domestic service.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1]See footnote 1 and source in Table 10. [2]Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4]Except machinery and transportation equipment industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

[1]These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1974. [2]With the introduction of 1974 weighting pattern in October 1978, city indexes were revised from January 1971 onwards. The revision was largely the result of making the procedures used in the compilation of city indexes conform to those of the Canada indexes.

Section 6 - Manufacturing

68 1. Total Inventories, Shipments and Orders in Manufacturing
69 2. Manufacturing Shipments by Industry
71 3. Manufacturing Inventories by Industry
73 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
74 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
75 6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
76 7. Tobacco and Beverages
76 8. Rubber
77 9. Footwear
78 10. Production of Sawn Lumber
78 11. Pulpwood, Wood Pulp and Newsprint
79 12. Primary Iron and Steel
80 13. New Motor Vehicles
81 14. Production of Motor Vehicles in Canada
82 15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)[1]

Annual average and month	Shipments	New orders received during month[2]	Unfilled orders at end of month	Inventory at end of month					Ratio of inventories owned to shipments
				Owned[3]	Held but not owned	All inventory held			
						Total	Raw materials	Goods in process	Finished products

[1]Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2]Shipments of goods manufactured within the establishments. [3]Total new orders received during the period at estimated selling value, net of cancellations. [4]Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.
Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

[1]Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2]Intended for cigarettes. [3]Includes pipe, plug, chewing, twist, snuff etc. [4]Sales to wholesalers, retailers and institutions which are subject to excise duty. [5]Includes sales for ships' air stores, embassies of Canada and for export. [6]End of period.

[1]Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2]Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3]Customs exports. [4]Mill shipments destined for export.
Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

[1]Data compiled according to the Steel Distribution Index revised January, 1964. [2]Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3]Excluding shipments for re-processing at maker's own plant. [4]Data compiled as submitted by the steel producers according to the steel industry distribution code.

[1]Gas types are included. [2]Includes producers' shipments for export. [3]In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4]End of period. [5]Electric and other. [6]Excludes apartment type machines. [7]Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
[1]Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2]Includes crude oil, condensate and pentanes plus. [3]Gross new production by field less field flared and waste.

[1]Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2]Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3]Includes stove oil, kerosene. [4]Includes aviation gasoline and aviation turbo fuel. [5]Includes propane and propane mixes and butane and butane mixes. [6]Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

[1]A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

Note: Components may not add to totals due to rounding differences.
[1]Data are on a gross basis i.e. they do not take account of cancellations or alterations of loans after initial approval. [2]Agency loans (loans made by other lending institutions on behalf of C.M.H.C.) are included under C.M.H.C. [3]Includes fraternal and mutual benefit societies, Quebec savings banks and, since May 1967, chartered banks. [4]Includes new and existing commercial structures and farm property.

[1]Includes export shipments. [2]Building Contractors, public and utility construction and structural steel fabricators.

Sources: Construction Type Plywood (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. (35-003), Hardboard (36-001), Rigid Insulating Board (36-002), Particle Board (36-003), Primary Iron and Steel (41-001), Steel Wire and Specified Wire Products (41-006), Domestic Refrigerators and Freezers (43-001), Cement (44-001), Gypsum Products (44-003), Mineral Wool (44-004), Asphalt Roofing (45-001).

Section 9 - Food and Agriculture

96 1. Farm Cash Receipts, by Source
98 2. Inspected Slaughter, Cold Storage Stocks and Eggs
98 3. Farm Input Price Index and Selected Components
99 4. Exports of Grains and Livestock Products
99 5. Milk
100 6. Sugar

[1]Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2]1977 and 1978 price indexes are subject to revision. [3]1978 price indexes are subject to revision. [4]Farm share only of motor vehicles. [5]The major groups include additional components than the selected ones shown.

Note: Components may not add to totals due to rounding and partial revisions.

[1]Fully secured by marketable bonds and stocks. Excludes loans to finance the purchase of Canada Savings Bonds. [2]Includes loans on the security of household property. [3]Not available on a monthly basis. [4]Includes loans to finance companies which are affiliates of retail merchandisers. [5]Religious, educational, health and welfare institutions. [6]Differs from general loans in Section 13, Table 2 by the exclusion of loans to instalment finance companies.

[1]Column numbers refer to Tables 3 and 4, Section 11. [2]Includes special transaction-trade, not shown separately. [3]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4]Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

[1]Column numbers refer to Tables 3 and 4, Section 11. [2]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3]Includes special transaction-trade, not shown separately. [4]Includes scrap. [5]Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp. Drilling, excavating and mining (68) now include oil and gas field machinery. Mechanical power transmission equipment (72) now exclude special industry machinery.

[1]Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2]Cargo includes air freight and express but excludes mail and excess baggage.

[1]Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2]Daily averages for period. [3]Mainly deposits of foreign banks. [4]Capital, rest fund and undivided profits as at the latest fiscal year-end. [5]Including issues payable in foreign currency. [6]Excluding Canadian day-to-day loans. [7]Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8]Loans to grain dealers and exporters. [9]Loans to finance purchase of Canada Savings Bonds at time of issue. [10]Including loans to instalment finance companies. [11]These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1]This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2]Seasonally adjusted data for Saskatchewan is not available.

[1]This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2]Beginning in December 1973, this category includes oil export tax. [3]March includes supplementary payments arising from the closing of the accounts.

1. Data are for public sector only.
2. Full-time equivalent educators are head counts for full-time teachers plus number of part-time teachers times the portion of the year that they teach. Teachers not reporting full-time equivalency are assumed to be of full-time status.
3. The number of full-time equivalent educators, for 'elementary', 'secondary' and 'elementary and secondary' schools include full-time and part-time educators excluding board staff but the total figures include board staff.
4. Data on teachers and students in Prince Edward Island for 1976-77 were arrived at using different definitions of school level. As such, pupil-teacher ratios based on these data are not valid.
5. Full-time equivalent students are head counts for students for students in grades 1 through the end of secondary, plus one-half the number of students in pre-elementary (except in Nova Scotia where pre-elementary students are full time).
6. Only total figures are available in Quebec for full-time equivalent students and educators.

Canadian Statistical Review

Data in this publication were retrieved from CANSIM® (Registered Trade Mark of Statistics Canada for its Canadian Socio-Economic Information Management System), and processed to create a photo-ready copy from which this publication was produced. CANSIM is the Statistics Canada computerized data bank; series published in this Review (as well as other data) are available on computer printouts, cards, tape or directly via terminal.

The identification numbers at the top of each column of data refer to the unadjusted and seasonally adjusted monthly or quarterly data in this column. Series maintained by Statistics Canada carry a "D" prefix (e.g. D 1375). The "B" prefix (e.g. B 1437) identifies series in CANSIM which are maintained by the Bank of Canada.

More details on which data is available can be found in the following:

CANSIM Summary Reference Index, Catalogue 12-202 — $8.

This index is a summary of the data in CANSIM. It provides a key to the Series Directory and is the first step in locating and ordering series from the CANSIM Main Base.

CANSIM Main Base Series Directory — $60.

This Directory is a detailed guide to the data on the CANSIM Main Base. It gives the title, start date, source of the data, and other descriptive material. The Directory is published in three volumes.

CANSIM Mini Base Series Directory, Catalogue 12-204 — $20.

This Directory is a detailed guide to the data on the CANSIM Mini Base — a standard subset of data originating from the CANSIM Main Base which is available at various Secondary Distributors.

CANSIM-Cross Classified Data Base Index — $7.

This index provides a summary of available data on the Cross Classified Data Base.

CANSIM-Cross Classified Data Base Directory — $20.

This directory provides a detailed guide to the Cross Classified Data Base. It provides a description of the structure of each table.

The seasonal adjustment method applied to economic time series at Statistics Canada is a computerized ratio-to-moving average method. The standard computer program used in Statistics Canada is the U.S. Bureau of the Census Method II, X-11 variant. Seasonal adjustment removes the effect of repetitive intra-year variations resulting from normal differences in weather, holidays with invariable dates, or other events which repeat with the same timing.

While seasonal adjustment allows a much better look at the underlying trend of a series, the adjusted series will contain irregular fluctuations. Small changes between months in the adjusted series may simply be erratic movements and, to obtain a clearer idea of the underlying trend, users should examine the adjusted series over a number of months. The MCD, or Months for Cyclical Dominance, in a table containing seasonally adjusted series, indicates the smallest span of months for which the average percent change without regard to sign in the trend cycle is greater than that in the irregular factor. For the smoothest series in MCD is 1, for the most erratic series it is 6. Applying a moving average of the period equal to the MCD tends to smooth irregular movements which may obscure the underlying trend.

Editorial Board

This publication is produced under the guidance of the Canadian Statistical Review Editorial Board, composed of the following members:
G. Leclerc (Chairman) — Assistant Chief Statistician, Economic Statistics Field
R.E. Drover — Director, User Services Division
B.J. Lynch — Director, Prices Division
R. Platek — Director, Methodology Division
M. Podehl — Director, CANSIM Division
— Director General, Content and Analysis Branch
— Director, Financial Flows and Multinational Enterprises Division
L.O. Stone — Senior Advisor, Population Studies and Statistics, Census
P.N. Triandafillou — Director, Industry Product Division
J.S. Wells — Director General, System of National Accounts and Analysis Branch
Editor-Canadian Statistical Review

Inquiries about the contents of the Canadian Statistical Review should be directed to the editor at: CANSIM Division, 9th Floor, R.H. Coats Bldg., Tunney's Pasture, Ottawa, Ontario, K1A 0T6.

Subscriptions

The *Canadian Statistical Review* and other catalogued publications of Statistics Canada, may be ordered from Publications Distribution, Statistics Canada, Ottawa, K1A 0V7 and remittances made payable to the Receiver General for Canada.

A weekly supplement containing data published between release dates of this review is distributed free of charge to all subscribers.

Historical data for selected economic indicators, both adjusted and unadjusted for seasonal variation, are distributed to subscribers in an Annual Supplement.

Correspondence should be directed to the *Canadian Statistical Review* CANSIM Division, Statistics Canada, R.H. Coats Tower, Ottawa, Ontario, K1A 0T6.

Monthly or quarterly data may not add to totals due to rounding.

Financial Activity in Canada

Fourth Quarter 1981

During the fourth quarter of 1981, demand for credit remained very strong, despite high interest rates and a slowing in economic activity. Domestic non-financial sectors of the Canadian economy raised $25,934 million on conventional credit markets, representing 30.5% of the value of final goods and services produced in the period. This compared with 18.9% in the third quarter (which was stronger than normal for the usually weak third quarter) and 30.2% in the same period of 1980. Borrowing by general government amounted to $12,106 million, about 45% of the funds so raised, with non-financial private corporations accounting for $6,419 million, about one quarter. The personal sector, the chartered banks and residents of the rest of the world provided most of the funds.

Net sales of Canada Savings Bonds in the quarter amounted to $11,249 million, contributing 93% of the net funds raised by governments on conventional credit markets and constituting over 40% of the total funds raised by non-financial domestic sectors on these markets in the quarter. The proportion of total funding provided by bank loans fell to 22%, the lowest share since the drop in bank loans outstanding in the third quarter of 1980. Net issues of marketable bonds accounted for 30% of the funds raised on these markets, down slightly from the previous quarter. Non-financial corporations (both public and private) accounted for over 60% of these net new issues, compared with about 50% in the previous quarter.

Among factors relating to financial activity in the fourth quarter were: a continuing high rate of inflation, very high rates of interest and a deepening of the recession; pronounced weakness in the growth of MI; an improvement in the external value of the Canadian dollar; strength in gross fixed capital formation by non-financial corporations despite weak profits; continuing weakness in the housing market; a widening of the financing requirement of the government sectors; the Canada Savings Bond campaign; and a drop in stock prices.

Economic Activity

In the fourth quarter, the real output of the Canadian economy contracted 0.5%, on a seasonally adjusted basis, following a decline of 0.9% in the previous quarter. Weakness in the housing market, corporate profits and consumer expenditures on durables was very apparent. The housing market declined to its lowest level in over ten years, despite an increase in activity in December as investors sought to secure tax benefits prior to the year's end. Corporate profits continued their decline dropping 8.3%, following a record drop of 15.3% in the third quarter. Consumer expenditures on durables weakened, compounding the depressed state of the automobile, furniture and appliance industries.

Non-farm inventories fell $675 million, in current dollars, largely in the retail auto sector, reflecting production reductions and price incentives. In the manufacturing sector, inventories accumulated, notably in paper, electrical products and primary metals.

Gross fixed capital formation by non-financial corporations rose 3.6% in real, seasonally adjusted, terms, paced by non-residential construction, up 4.9%. This strength is striking in view of the weakness in net savings by non-financial private corporations, which resulted in internally generated funds providing only 61% of their non-financial capital formation. This was on the same order as the previous quarter, when net savings fell by a record amount, but down sharply from 70% in the same period of 1980. Much of the increase was in energy related fields (mineral, fuels, petroleum and gas, pipelines, chemicals, transportation) as well as primary metals and communications.

Consumer expenditures (in current dollars) rose 2.0%, while labour income grew 2.6%, contributing to a very high personal savings rate of 12.9% (seasonally adjusted).

Interest Rates Capital Markets and Monetary Aggregates

The reduced level of economic activity and the higher personal savings rate are mirrored in the monetary aggregates. With a lower level of economic activity, MI continued the fall that had begun in the summer through November, during which month the drop was very pronounced. In December, MI grew moderately. On the other hand, M2, which includes personal, interest bearing deposits, rose sharply[1].

The Bank of Canada's tight monetary policy is designed to reduce the rate of inflation, including the minimization of the inflationary impact of a depreciating external value of the Canadian dollar. This policy had prompted the Bank to increase interest rates in Canada in the third quarter, to keep in line with their rapid rise in the United States. As the recession deepened and price increases slowed in the United States, interest rates eased. However, to prevent too sharp a drop in Canada in October and November, the Bank intervened in the market by selling Government of Canada Treasury bills from its inventory. These sales contributed to the development of a very wide yield differential on similar instruments in Canada and the United States. On 30-day commercial paper, for example, there was an uncovered yield differential of 535 basis points toward the end of November. This represented a major contributing factor to the relative strength of the Canadian dollar, which reached 85 cents U.S. at this time. In the following three weeks, the Bank of Canada acted to restrain a rise in rates, increasing its holdings of Treasury bills by $1,724 million. By the end of the year, short-term rates had resumed their downward trend in Canada, while they had risen in the United States. This development contributed to a weakening of the Canadian dollar, which closed December at 84.35 cents U.S., though it was still up about one and half cents U.S. over the quarter.

Canada's international reserves rose $1,459 million during the period under review, allowing the federal government to repay the U.S. $800 million outstanding on its line of credit with Canadian chartered banks. The increase in the reserves was primarily the result of the wide yield differentials that had existed for most of the quarter. The incentive to place bonds abroad, while less than in the third quarter, remained strong for most of the quarter, and prompted a record net quarterly flow of $5,548 million, substantially higher than any previous quarter. The size of these net sales to non-residents may have been the result of a large overhang of new borrowings from the previous quarter when interest rates, at record heights, appeared to deter some borrowers from going to the market at that time. Among the issues placed abroad was a U.S. $300 million Government of Canada bond sold to the Saudi Arabian Monetary Authority. These funds were used to bolster the reserves.

These net new issues more than offset the considerable outflows that resulted from the reduction of direct investment in Canada and the increase in direct investment abroad. Among the more important transactions affecting the former were the purchase of a substantial minority holding in Suncor Inc. by the Ontario Energy Resources Ltd., and the acquisition of Canadian International Paper Company Limited by a subsidiary of Canadian Pacific Enterprises Limited.

The Canada Savings Bond campaign produced record net sales of $11.6 billion.[2] As a result, these bonds amounted to 23.8% of the Government of Canada's liabilities at the end of 1981, up from 19.3% the year earlier, and reversing several years' decline in the importance of this instrument. The success of the campaign was largely attributable to the coupon rate of 19.5% for the first year. The rate had been set in September when yields on comparable instruments where in that range but the drop in these rates in the following weeks made Canada Savings Bonds a very attractive purchase. The substantial cash deposits generated allowed the federal government to reduce its Treasury bills outstanding by $2,190 million and retire a $300 million bond in December without refinancing it. Despite these actions, the federal government's Canadian dollar deposits rose $4,521 million in the quarter.

The reduction in the amount of Treasury bills outstanding would have placed strains on the chartered banks' ability to meet their secondary reserve requirements, given the importance of the instrument for this purpose. The Bank of Canada, therefore, announced a reduction of the secondary reserve requirements, from 5% to 4% of reservable liabilities, effective December 1st. The chartered banks were able to reduce their holdings of this instrument by $1,190 million.

Stock prices in North America rose during the quarter. The Toronto Stock Exchange Composite 300 Index rose 3.8%, while the Standard and Poor's Composite Index of 500 stocks rose 4.7%. Among the more heavily traded sectors on the Toronto Stock Exchange, oil and gas rose 3.3%, industrial products 10% and financial services up 7%, while metals and minerals fell 3.3%.

---

[1] The growth of M2 is somewhat misleading. Following the change in reporting, it now includes all the chartered banks' non-banking subsidiaries. Moreover, the creation of a number of new banks which had previously operated as financial institutions also distorts the figures. Most of the deposit liabilities of these new banks and the newly consolidated non-bank subsidiaires are included in the broader monetary aggregates.

[2] Purchase of these bonds were a contributing factor to the weakness of MI in November to the extent that they were acquired from funds included in this aggregate. Government of Canada deposits are excluded from MI.

Review of 1981

Summary

During 1981, demand for credit by the non-financial sectors of the Canadian economy was exceptionally high, amounting to $83,399 million, or over 25% of the value of final goods and services produced in the year. This compared with 21% in 1980, and represented the highest proportion of Gross National Product since 1978. Non-financial private corporations doubled the amount of funds they raised on these markets, from $17,593 in 1980 to $34,288 million in 1981, that is, from under 30% to over 40% of total funds raised by domestic non-financial sectors. General government raised slightly more in 1981 ($19,282 million) but its share fell from 29% to 23%. The personal sector's share fell from 35% to 27%. The growth in bank loans continued during 1981, as they provided 34% of the total funds raised on conventional credit markets, up from 22% in 1980. Bonds provided 36% but this figure is swollen by Canada Savings Bonds. If this instrument is removed, the proportion raised by bonds amounted to 27%, on the same order as the year before. Mortgages accounted of 10% of these funds, down from 18% in 1980, while Government of Canada Treasury bills produced no net new infusion of funds, compared with a 9% share in 1980. Apart from the chartered banks and the personal sector, non-residents were the major source of funds, particularly through the purchase of bond issues.

The strength of financial activity would appear surprising in view of the economic situation in Canada in 1981. Although there was overall growth of real output of some 3% for the year as a whole, all of the increase was concentrated into the first few months of the year. Real consumer expenditures were virtually unchanged, reflecting the weakness in the interest-sensitive industries such as automobiles and appliances. The number of housing starts rose somewhat from the very depressed levels of 1980, but at, 178,000, remained substantially below the industry's generally accepted replacement needs.

The proportion of gross national expenditure devoted to housing fell to its lowest level since 1945. Corporate profits declined sharply, with the result that internally generated funds amounted to only 57% of the non-financial capital acquisition by non-financial private corporations, down from 77% the year earlier. Non-farm inventories rose $679 million, compared with a drop of $701 million in 1980, reflecting the stockpiling in manufacturing industries. This stock accumulation would appear to have been largely involuntary. The current account deficit of Canada's balance international payments more than tripled, to $6,576 million, largely as a result of a substantial increase in interest payments to non-residents.

There were a few areas of strength in the economy. Gross fixed capital formation by non-financial private corporations showed an increase of 17%, boosted by non-residential construction. Among those industries showing increased capital formation were paper, petrochemicals and pipelines. Personal disposable income also grew significantly, up 15.7%, the strongest rise in six years. With consumption in current dollars increasing 13%, the personal savings rate reaches a record 11.6%, compared with 10.1% in 1980, and represented the ninth consecutive year that this ratio has remained about 9%.

Financial Markets

Among factors affecting capital markets in Canada in 1981 were: persistently high rates of inflation, high rates of interest and a restrictive monetary policy; a generally weaker external value of the Canadian dollar; exceptionally strong demand for bank loans, associated with a series of very large takeovers; the revised Bank Act; and weaker stock markets, particularly in the second half of the year.

The Bank of Canada maintained a tight monetary policy for most of 1981, in the face of strong inflationary pressures, a very restrictive monetary policy in the United States and a weaker external value of the Canadian dollar. The Federal Reserve Board's policy saw interest rates in the United States reach unprecedented levels: the bank's prime rate reached 20.5% for much of the third quarter. In Canada, rates climbed even higher: the prime rate reached 22.75% in

August, and long dated Canada's rose to 18.2% by the end of September.

The inverse yield curve that had characterized capital markets in Canada for much of the past four years persisted for the first eleven months of 1981. In December, while interest rates on short dated instruments continued to fall, longer dated bonds rose, producing the first positive yield curve since October 1980.

In view of the inflationary consequences of a depreciating Canadian dollar, vis-à-vis its its United States counterpart, the Bank chose to raise rates in Canada to prevent too steep a drop. Even so, the Canadian dollar fell to 80.31 cents U.S. in August, before recovering to close the year at 84.35 cents U.S.. While much of the improvement was attributable to the very wide yield differentials that persisted for most of the latter part of the year, the oil pricing agreement between the federal government and the Province of Alberta that was signed on September 1st was also a contibuting factor.

The actions of the Federal Reserve Board, and the very sharp increase in rates that they prompted, had the effect of reducing MI in Canada. The growth of this aggregate, while remaining within the Bank's target range, began to weaken in April, and apart from a surge in July, during the mail strike, continued to fall until November. At that time, seasonally adjusted MI was at the same level as it had been in June 1980. On the other hand, the broader monetary aggregates, which include interest bearing deposits, continued to grow strongly.

Very high mortgage rates and high prices had a severe effect on the housing market. During the first quarter, a buying surge pushed up prices in several major urban centres. Though prices dropped somewhat in the following quarter, they remained high. Coupled with mortgage rates that rose from 15.17% in January to 22.75% in August, the housing market suffered acutely. Net new mortgages amounted to $8,531 million, down some 23% from the previous year, and down 40% from the peak year of 1978. The increases in mortgage rates, which had been lagging behind rates elsewhere in the market over the past four years, prompted changes in the instrument. The standard five year mortgage of the past ten to fifteen years rapidly was replaced by much shorter terms before renegotiation. Terms from six months to three years became more common and variable rate mortgages, characteristic of this instrument in the United Kindom for many years, began to appear. As with other debt instruments, neither lender nor borrower wanted to remain committed to a fixed rate for a long term during a period of uncertainty.

Despite the very high rates of interest that persisted all year, bank borrowing was very strong. Much of the strength was due to a series of very large takeovers. Many, but not all, were related to the federal government's policy of increasing Canadian ownership in the oil industry, under the National Energy Program. Among these takeovers were: Hudson's Bay Oil and Gas Limited purchase of Cyprus Anvil Mining Corporation; the acquisition of a majority of the shares of Hudson's Bay Oil and Gas Limited by Dome Petroleum Limited; Petro Canada's purchase of a majority of the shares of Petrofina Canada Inc.; the takeover of Abiti-Price Inc. by Olympia and York Limited; the purchase of 49.5% of the shares of MacMillan Bloedel Limited by Noranda Mines Limited; the acquisition of 39% of the shares of Noranda Mines Limited by Brascade Resources Inc.; the purchase of Aquitaine Company of Canada Limited by CDC Petroleum Inc.; the takeover of CanDel Oil Limited by Sulpetro Limited; as well as the transactions involving Suncor Inc. and the Canadian International Paper Company referred to above. In addition, several real estate investment trusts were acquired by their managing banks.

Net new issues of marketable bonds[3] amounted to a record $24,985 million, up almost a third from 1980. Non-financial private corporations raised $5,671 million, almost three times the increase of their indebtedness of this instrument in 1980. These companies realized $2,658 million in net new funds in the fourth quarter, with about half being borrowed from abroad. The industries showing among the largest increase in bond indebtedness were: metal mines, mineral fuels, primary metals, non-metallic mines, petroleum and coal, pipelnes, communications, gas distribution and real estate rentals. The Government of Canada's net issues of marketable bonds amounted to $5,027 million, down a third from 1980. Of the federal government's gross new marketable issues, over three quarters had an original term to maturity of five years or less, and over one half had extendable features at the holder's option.

Net equity issues amounted to a record $13,222 million, exceeding the amount raised in 1980 by 72%. Non financial private corporations placed $6,643 million in net equity sales in 1981; among those industries showing the largest increases were: metal mines, mineral fuels, pipelines, gas distribution and primary metals. The chartered banks and holding companies also placed substantial new equity issues.

Stock prices remained firm for most of the first half of the year but with the on-set of the recession and the unprecedented returns available on debt instruments, they fell during the second half of the year. The Toronto Stock Exchange Composite 300 Index closed the year down 13.8%, while the Standard and Poor's Composite 500 Index fell 7.3%. By the end of 1981, stock prices in Canada had achieved a real, inflation adjusted, capital gain of about 25% since the end of 1974.

---

[3] Net new issues of marketable bonds are defined as gross new issues (not including Canada Savings Bonds) less retirements and excluding issues to the Canada Pension Plan.

Consumer credit outstanding increased $4,980 million, reflecting the weakness of consumer expenditures on durables. The growth of this financing vehicle has slowed sharply in nominal dollars since 1978, when the increase was $4,530 million. Consumer credit outstanding as a proportion of personal disposable income amounted to 22.5% at the end of 1981.

The revised Bank Act, passed by Parliament in 1980, was gradually implemented in 1981. Apart from the consolidation and revised reporting forms mentioned above, several other aspects of the Act have had implications on financial markets. Among these were the creation of a number of new banks, the requirement that foreign currency deposits by residents of Canada and booked in this country be reservable, and the removal of the prohibition of the issuance of foreign currency debentures by the banks.

Twenty one foreign owned organizations were granted their charters and began operating as banks in 1981. Most of these new banks had operated as financial institutions previously. These banks are restricted to eight per cent of the total assets of the industry.

The reserve requirements for foreign currency deposits had two effects on capital markets. Firstly, it meant that Canadian lenders obtained a better return on these deposits by booking them in countries where there were lower or no reserve requirements. The chartered banks' branches and subsidiaires abroad were able to relend to head office in Canada. Secondly, it prompted a growth in foreigh currency short-term paper, which is not reservable. As such, a lender will receive a higher interest rate than on a reservable deposit, while the borrower will obtain a lower rate.

Prior to the passage of the new Act, the banks were not allowed to issue foreign currency debentures. However, since this prohibition was removed they have issued over $800 million in this type of instrument, which must have an original term to maturity of at least five years. Other similar instruments, with terms of less than five years, have been issued as deposit notes and are included in foreign currency deposits to the extent that they were booked in Canada.

[1]The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506.
[2]Beginning with 1978, this is subdivided into entrepreneurs and managers-administrators. For breakdown refer to CANSIM main base. [3]Includes logging, fishing, trapping and hunting.
[4]Includes mechanical and construction. [5]Includes a small number in non-specified occupations. [6]Beginning with 1978 includes fiancés and fiancées. [7]Does not include students entering Canada on students' visas. [8]Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force. Beginning with 1978, fiancés and fiancées are included with spouses.

Section 3 - System of National Accounts

1. Income and Expenditure Accounts

18 1.1 National Income and Gross National Product
18 1.2 Gross National Expenditure
19 1.3 Gross National Expenditure, Constant Dollars
19 1.4 Sources of Personal Income
20 1.5 Disposition of Personal Income
20 1.6 Sources and Disposition of Gross Saving
21 1.7 Government Revenue, Expenditure, and Surplus or Deficit, by Level of Government
25 1.8 Implicit Price Indexes, Gross National Expenditure
25 1.9 Relation between Gross National Product at Market Prices and Gross Domestic Product at Factor Cost

2. Domestic Product by Industry

26 2.1 Real Domestic Product by Industry of Origin, Quarterly
27 2.2 Real Domestic Product by Industry of Origin, Monthly

3. Balance of International Payments

32 3.1 Canadian Balance of International Payments, Current Account, All Countries
33 3.2 Canadian Balance of International Payments, Current Account, Area Distribution
34 3.3 Canadian Balance of International Payments, Capital Account, All Countries

1—Income and expenditure accounts

Table 1.1: National income and gross national product (millions of dollars)

Year and quarter	Wages, salaries, and supplementary labour income	Military pay and allowances	Corporation profits before taxes[1]	Deduct dividends paid to non-residents[2]	Interest & misc. investment income[3]	Accr'd net income of farm operators from farm prod.[4]	Net income of non-farm un-incorp. business incl. rent[5]	Inventory valuation adjust.[6]	Net national income at factor cost	Indirect taxes less subsidies	Capital consump. allowances & misc. val. adj.	Residual error of estimate	GNP at market prices	GNP at market prices excl. accrued net income of farm operators

[1]Excludes profits (net of losses) of government business enterprises. [2]Includes the withholding tax applicable to this item. [3]Includes profits (net of losses) of government business enterprises and interest and miscellaneous investment income of government. [4]Includes value of physical change in farm inventories. The seasonally adjusted data includes an arbitrary smoothing of crop production and standard seasonal adjustment for withdrawals of grain from farm stocks and the change in other farm-held inventories. Because of the arbitrary element, too precise an interpretation should not be given the seasonally adjusted figures. [5]Includes net income of independent professional practitioners. [6]See footnote 4, Table 1.2.

[1]Includes defence expenditures. [2]Includes outlay on new durable assets such as building and highway construction by governments, other than government business enterprises. Excludes defence construction and equipment which is defined as current expenditure. [3]Includes capital expenditures by private and government business enterprises, private non-commercial institutions and outlays on new residential construction by individuals and business investors. Capital expenditure is defined to include all transfer costs on the sales and purchases of existing fixed assets. [4]The book value of inventories is deflated to remove the effect of price change and the derived "physical" change is then valued at average prices of the current period to obtain the value of physical change. The difference between the value of physical change and the change in book value is called the inventory valuation adjustment, (as shown in Table 1.1). [5]See footnote 4, Table 1.1.

[1]The implicit price deflators of the seasonally unadjusted components of Gross National Expenditure, derived by dividing the value figures in current dollars by the constant dollar figures, are not suitable as indicators of quarter-to-quarter price change. This is because they are currently weighted and therefore are affected by compositional shifts which occur within the unadjusted components of Gross National Expenditure, on a quarter-to-quarter basis. Quarter-to-quarter movements in the implicit price deflators based on seasonally adjusted data are less subject to the problem of shifting weights and may be used as a measure of price change.

[1]Includes the taxes on life insurance companies introduced in 1969. At the present time, for National Accounts purposes, life insurance companies are treated as associations of individuals in so far as their investment activities are concerned. The 1969 taxes are thus included here pending a complete review of the treatment of insurance. [2]Tax liabilities. [3]Withholding taxes. [4]The quarterly figures of real property taxes unadjusted and seasonally adjusted are obtained by dividing annual totals by four. Since real property tax rates have been generally upward, this treatment gives rise to a fictitious seasonal between the fourth and first quarters in the seasonally adjusted taxes of series.

For source see Table 1.9.

[1]These implicit indexes are current weighted price indexes. They reflect not only pure price changes, but also changing expenditure patterns within and between major groups. Quarter-to-quarter comparisons based on the seasonally adjusted data are less subject to the problem of shifting weights than are similar comparisons based on data unadjusted for seasonality, and therefore may be used as indicators of price change.

For source see Table 1.9.

Table 1.9: Relation between gross national product at market prices and gross domestic product at factor cost (millions of dollars)

[1]The labour force as a percentage of the population 15 years of age and over. The participation rate for a particular group (age, sex etc.) is the labour force in that group expressed as a percentage of the population for that group. [2]The unemployed as a percentage of the labour force. The unemployment rate for a particular group (age, sex etc.) is the unemployed in that group expressed as a percentage of the labour force for that group. Seasonally-adjusted rates are calculated by dividing seasonally-adjusted unemployment by the sum of seasonally-adjusted employment and seasonally-adjusted unemployment (i.e. seasonally-adjusted labour force by summation).

Note: Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. For other explanatory material see notes at the end of Catalogue No. 71-001.

Source: The Labour Force (71-001), monthly.

[1]"Beneficiaries" refer to the number of persons receiving $1.00 or more in unemployment insurance benefit during a specific week each month. [2]Annual figures are averages of 12 months. [3]Prior to July 1971, includes adjustments for cancellation of warrants and collection of overpayments. [4]Trainees on courses approved by Canada Employment and Immigration Commission.

[1]Statistics on work stoppages include all strikes and lockouts whether legal or illegal, which last for one-half day or more and amount to 10 or more person-days of time lost. Time lost by workers indirectly affected, such as those laid off because of a work stoppage by other employees, is not included. Data is published 45 days after the end of reference month. [2]The industry groups from January 1976 forward, are based on the 1970 Standard Industrial Classification. [3]The number of person-days is calculated by multiplying the number of workers involved in a work-stoppage by the number of normal working days during the stoppage. Adjustments are made for establishments on shift work, etc. [4]The total includes all work stoppages. The agriculture, finance, insurance and real estate and public administration and defence industries are not shown separately. Should strikes occur in these industries, the time lost also will be shown in the total. [5]Includes publishing and allied industries. [6]Includes storage and communication industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]Excludes agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households, public administration and defence. [3]Includes storage, electric power, gas and water utilities. [4]Excludes domestic service.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. The Industrial Composite is the sum of all industries except agriculture, fishing and trapping, education and related services, health and welfare services, religious organizations, private households and public administration and defence.

[1]See footnote 1 and source in Table 10. [2]Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 9. [3]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. [4]Except machinery and transportation equipment industries.

[1]The data in Tables 9 to 16 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. [2]In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing.

[1]These weights, provided as a general guide, show the relative importance of the major components of the C.P.I. They are based on expenditure values derived from quantities and prices of year 1978.

*For further information the weights and methodology associated with the Consumer Price Index, see "The Consumer Price Index Reference Paper, Concepts and Procedures, updating based on 1978 expenditures," cat. 62-553, occasional.

Section 6 - Manufacturing

68 1. Total Inventories, Shipments and Orders in Manufacturing
69 2. Manufacturing Shipments by Industry
71 3. Manufacturing Inventories by Industry
73 4. Estimated Value of Shipments and Unfilled Orders by Economic Use Classification
74 5. Estimated Value of Inventories Owned and Raw Materials by Economic Use Classification
75 6. Estimated Value of Goods in Process and finished Products by Economic Use Classification
76 7. Tobacco and Beverages
76 8. Rubber
77 9. Footwear
78 10. Production of Sawn Lumber
78 11. Pulpwood, Wood Pulp and Newsprint
79 12. Primary Iron and Steel
80 13. New Motor Vehicles
81 14. Production of Motor Vehicles in Canada
82 15. Refrigerators, Freezers, Washing Machines and Clothes Dryers

Table 1: Total inventories, shipments and orders in manufacturing based on the 1970 standard industrial classification (million dollars)[1]

Annual average and month	Shipments	New orders received during month[2]	Unfilled orders at end of month	Inventory at end of month						Ratio of inventories owned to shipments
				Owned[3]	Held but not owned	All inventory held				
						Total	Raw materials	Goods in process	Finished products

[1]Estimates of manufacturers' shipments, inventories and orders are based on a monthly survey of a sample of manufacturing establishments, benchmarked to the annual census of manufacturers. [2]Shipments of goods manufactured within the establishments. [3]Total new orders received during the period at estimated selling value, net of cancellations. [4]Total manufacturing inventory owned by manufacturing establishments. Other inventory such as that of goods purchased for resale is not included.
Note: All series are subject to revision each year when more recent Census of Manufactures data become available.

[1]Starting with January 1968, production is manufacturers' production; prior to that date production was indicated by the use of excise duty stamps. [2]Intended for cigarettes. [3]Includes pipe, plug, chewing, twist, snuff etc. [4]Sales to wholesalers, retailers and institutions which are subject to excise duty. [5]Includes sales for ships' air stores, embassies of Canada and for export. [6]End of period.

[1]Pulpwood produced for domestic use and excluding exports, but including receipts of purchased roundwood. [2]Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. [3]Customs exports. [4]Mill shipments destined for export.
Sources: Pulpwood and Wood Residue Statistics (25-001), Exports by Commodities (65-004), Statistics Canada; Bulletins of the Canadian Pulp and Paper Association: "Monthly Pulp Summary" and "Monthly Newsprint Statistics".

[1]Data compiled according to the Steel Distribution Index revised January, 1964. [2]Figures on net shipments relate to semi finished and rolled steel products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. [3]Excluding shipments for re-processing at maker's own plant. [4]Data compiled as submitted by the steel producers according to the steel industry distribution code.

[1]Gas types are included. [2]Includes producers' shipments for export. [3]In some cases these shipments are not at the factory level, and stocks at beginning of month plus production less shipments do not equal stocks at end of month. [4]End of period. [5]Electric and other. [6]Excludes apartment type machines. [7]Excludes other than electric.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision.
[1]Supply and disposition for both Crude Oil and Natural Gas will not agree because of losses, inventory changes, pipeline fuel used etc. [2]Includes crude oil, condensate and pentanes plus. [3]Gross new production by field less field flared and waste.

[1]Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. [2]Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. [3]Includes stove oil, kerosene. [4]Includes aviation gasoline and aviation turbo fuel. [5]Includes propane and propane mixes and butane and butane mixes. [6]Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

[1]A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly.

[1]Includes export shipments. [2]Building Contractors, public and utility construction and structural steel fabricators.

Sources: Construction Type Plywood (35-001), Production, Shipments and Stocks on Hand of Sawmills East of the Rockies (35-002), Production, Shipments and Stocks on Hand of Sawmills in B.C. (35-003), Hardboard (36-001), Rigid Insulating Board (36-002), Particle Board (36-003), Primary Iron and Steel (41-001), Steel Wire and Specified Wire Products (41-006), Domestic Refrigerators and Freezers (43-001), Cement (44-001), Gypsum Products (44-003), Mineral Wool (44-004), Asphalt Roofing (45-001).

Section 9 - Food and Agriculture

96 1. Farm Cash Receipts, by Source
98 2. Inspected Slaughter, Cold Storage Stocks and Eggs
98 3. Farm Input Price Index and Selected Components
99 4. Exports of Grains and Livestock Products
99 5. Milk
100 6. Sugar

[1]Price indexes of inputs measure only changes in prices of units of inputs. They do not reflect other important changes in costs of production, such as changing quantities and productivity of inputs. They should not be interpreted, therefore, as equivalent to indexes of cost per unit of output. Direct comparison of them with price indexes of output can yield misleading indications of the changing relationship of costs and income. [2]1977 and 1978 price indexes are subject to revision. [3]1978 price indexes are subject to revision. [4]Farm share only of motor vehicles. [5]The major groups include additional components than the selected ones shown.

[1]Column numbers refer to Tables 3 and 4, Section 11. [2]Includes special transaction-trade, not shown separately. [3]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [4]Revisions made to ensure consistent coverage. The most important are: Farm machinery (73) now includes tractors; Drilling, excavating and mining (68-72) now exclude metalworking, woodworking machinery, etc.

Source: Exports by Commodities (65-004), Summary of External Trade (65-001).

Table 4: Merchandise imports, by commodity, based on the standard commodity classification[1] (million dollars)

[1]Column numbers refer to Tables 3 and 4, Section 11. [2]The annual index, being calculated separately, will differ slightly from the index obtained by the average of the twelve months. [3]Includes special transaction-trade, not shown separately. [4]Includes scrap. [5]Some series such as general purpose machinery have been revised to ensure consistent coverage. Other important revisions were: Paper and board (44) now excludes woodpulp; Drilling, excavating and mining (68) now include oil and gas field machinery; Mechanical power transmission equipment (72) now exclude special industry machinery.

[1]Beginning with 1970, figures include the operations of the seven largest airlines in Canada. These transcontinental (Air Canada and CP Air) and regional airlines (Eastern Provincial Airways, Nordair, Pacific Western Airlines, Quebecair and Transair) normally account for approximately 85 per cent of the total revenues and expenses reported by Canadian commercial air carriers. [2]Cargo includes air freight and express but excludes mail and excess baggage.
Sources: Air Carrier Operations in Canada (51-002), Statistics Canada, Air Carrier Financial Statements (51-206), Statistics Canada, Aviation Statistics Centre Service Bulletin (51-004), Statistics Canada.

[1]Bank of Canada deposits are averages of the juridical days in the month shown while Bank of Canada notes and Canadian dollar deposit liabilities are averages of the 4 consecutive Wednesdays ending with the second last Wednesday in the previous month. [2]Daily averages for period. [3]Mainly deposits of foreign banks. [4]Capital, rest fund and undivided profits as at the latest fiscal year-end. [5]Including issues payable in foreign currency. [6]Excluding Canadian day-to-day loans. [7]Securities purchased direct from issuer with a term of less than one year at time of issue are classified as loans. [8]Loans to grain dealers and exporters. [9]Loans to finance purchase of Canada Savings Bonds at time of issue. [10]Including loans to instalment finance companies. [11]These series reflect the combination of two CANSIM series.

Note: Components may not add to totals because rounding. Cheques drawn on the Receiver General or cheques drawn on bank deposit accounts held in the name of the Receiver General are not included in the data.

[1]This series covers 50 clearing house centres. With the advent of centralized data processing, bank clearing houses have been eliminated. The current allocation of cheques cashed continues to reflect what had been the previous centres; however, this comparison may not remain valid through time. [2]Seasonally adjusted data for Saskatchewan is not available

[1]Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by companies operating in Canada representing over 80% of new ordinary and of new group contracts. [2]Total new settled-for ordinary sales in Canada.
[3]Total sales figure does not include sales for Northwest Territories. [4]Under new or amended contracts.

[1]This statement includes only receipts relating to budgetary revenue. Excluded are non-budgetary revenues such as Old Age Security Fund taxes, Prairie Farm Assistance Act levies, employer and employee contributions to government-held funds (Unemployment Insurance, Superannuation etc.), interest on government-held funds, and taxes collected on behalf of and transferred to other governments. [2]Beginning in December 1973, this category includes oil export tax. [3]March includes supplementary payments arising from the closing of the accounts.

1. Actual offences are those known to the police which investigations prove to be 'founded' and do not include 'unfounded'.
2. Rates for Canada and the provinces are based on Census population projection figures for the reporting year. Rates for the metropolitan areas are based on population figures supplied by the police departments within the metropolitan areas.
3. Canada figures include Yukon and Northwest Territories.
4. Everyone who by criminal negligence causes death to another person.
5. Everyone who by criminal negligence causes bodily harm to another person.
6. Everyone who is criminally negligent in the operation of a motor vehicle.
7. Everyone who, having the care, charge or control of a vehicle that is involved in an accident with a person, vehicle or cattle in charge of a person, with intent to escape civil or criminal liability fails to stop his vehicle, give his name and address and, where any person has been injured, offer assistance.
8. Everyone who drives a motor vehicle on a street, road, highway or other public place in a manner that is dangerous to the public, having regard to all the circumstances including the nature, condition and use of such place and the amount of traffic that at the time is or might reasonably be expected to be on such place.
9. Where a peace officer on reasonable and probable grounds believes that a person is committing, or at any time within the preceding two hours has committed, an offence under section 234 or 236, he may, by demand made to that person forthwith or as soon as practicable, require him to provide then or as soon thereafter as is practicable a sample of his breath suitable to determine the proportion, if any, of alcohol in his blood, and to accompany the peace officer for the purpose of enabling such samples to be taken.
10. Everyone who, while his ability to drive a motor vehicle is impaired by alcohol or a drug, drives a motor vehicle or has the care or control of a motor vehicle, whether it is in motion or not.
11. Everyone who drives a motor vehicle in Canada while he is disqualified or prohibited from driving a motor vehicle by reason of the legal suspension or cancellation, if any province, of his permit or licence or of his right to secure a permit or licence to drive a motor vehicle in that province.
12. Includes infractions under federal government traffic regulations excluding parking violations. The 1979 figures have been revised since the publication of the 1979 Crime and Traffic Enforcement Statistics.
13. Includes infractions under the various provincial statutes dealing with traffic, excluding parking violations. The 1979 figures have been revised since the publication of the 1979 Crime and Traffic Enforcement Statistics.
14. Includes traffic infractions under municipal traffic regulations and by-laws, excluding parking violations. The 1979 figures have been revised since the publication of the 1979 Crime and Traffic Enforcement Statistics.
